Sent: October-24-18 4:08 PM
To: Roberts, Tara R; CCG ATL ROC / COR ATL GCC (DFO/MPO)
Subject: RE: McLaren refit.

Hi Tara,

I tried reaching you a little while ago, as per my voicemail I have been speaking with the vessel and I also reached out to the program to confirm how long they wish to extend – waiting on a call back.

In addition I don't recall seeing a cost estimate for the 6 SOF people joining the SWA next week – did you send this to Dan Kelly directly?

Subject: FW: McLaren refit.

Good afternoon, please see the request below [REDACTED]

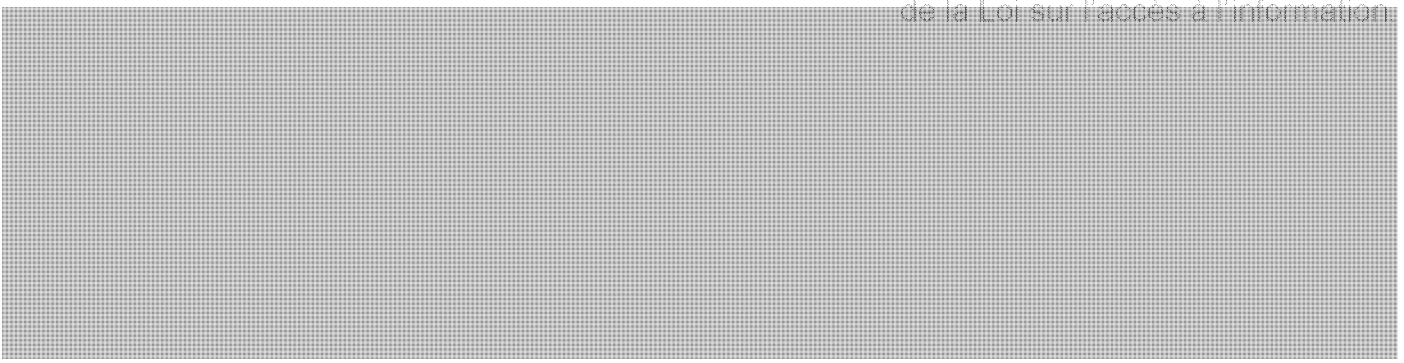

The FOP had transit days (3 days) built in for the McLaren, as we did not know where the vessel would have to travel for the docking. [REDACTED]

[REDACTED] Clearly the vessel still needs to transit time to arrive before the refit starts so there really isn't much time he could gain [REDACTED]

Thanks.

Tara

Subject: RE: McLaren's bidder's conference

Hey James,

I think for that ship we are also swapping the AIS antenna with the antenna for that VHF radio in the box by the aft door so we can trial the AIS antenna further from the mast.

There is also an ISD to swap the feeds for two Universal Digital Repeaters on the bridge (speed and gyro I think) that has no T-Spec since it is just a couple feet of cable in the EER. You could do that during this refit if you have time and the yard is cool with someone working in there.

Cheers,

Matt

Subject: RE: McLaren's bidder's conference

Hi Matt,

Thanks for the update. I just put an order in for the cable, are there any jobs planned other than the GMDSS?

I'm sure we'll have time to make the 3 bay into a 2, it's a fairly simple process.

James

Subject: FW: McLaren's bidder's conference

Hey James,

FYI – McLaren drydocking in Sambro – Date TBA (after Nov 5)

Not sure if you guys are in the loop for this already or not.

The equipment is here in our cage. Most of it is inside a rather large crate, but the crate does fit in a cargo van. And then there is a small crate for the MF tuner as well. Just let us know when you guys want to grab that stuff.

The bay is still the 3 bay setup that will have to be taken apart so the middle part can be removed. I think the T-spec says for the contractor to do it, but you might want to do it yourselves if you have time.

I should be back from the WAAS test in Saint John by then, so I will hopefully be able to attend that meeting and talk to them about those battery cables.

Cheers,

Matt

Subject: RE: McLaren's bidder's conference

Hi Matt,

just wanted to let you know that the McLaren's drydock refit was awarded to CME Sambro last Thursday. There will be a pre refit meeting on Nov 5th (No time given yet) at the yard where we will briefly review the spec. If you could arrange for any Government Supplied Material required for your spec items to be delivered to Sambro that would be great. Here is the shipyard's address:

Canadian Maritime Engineering
1420 Ketch Harbour Rd
Sambro Head, NS B3V 1L1

Any questions don't hesitate to ask,

Jeff

Subject: McLaren's bidder's conference

Hi Matt,

Just wanted to give you a quick message to let you know the McLaren's drydock specification was tendered on Friday (Sept 31st) by PSPC. We have arranged a bidders conference and viewing of the vessel for the work @ BIO, Tuesday Oct 9th. Currently, the meeting is set to be on the ship but if too many contractors confirm their attendance we may have to find a boardroom in BIO. The viewing is @ 9 am and the conference is at 11am. You only need to come to the conference as the viewing is more of a chance for the contractors to roam the ship and size up the work package. I've attached the current revision of the spec for your reference (minus the drawing package).

Any questions feel free to ask,

Jeff

Subject: Fuel transfer with McLaren

Hello Captain,

The CCGS Corporal McLaren is currently @ BIO and scheduled to transit to Sambro for drydock on Monday, Nov.5th. Before they depart on Monday they need to discharge approximately 15m3 of fuel.

What time are you planning to arrive in BIO for crew change next week? If it's Monday would you be able to load the 15m3 of fuel from the McLaren?

Please advise,

Ambrose McGrath
Operations Officer for
Regional Operations Centre Atlantic

Subject: Friday Update ME

Friday Update from ME:

Ann Harvey:

Non-operational all week. Drydocked at Verreault shipyard. The CCGS Ann Harvey has significant delays from the original schedule based on our Progress Meeting. End of February estimated delivery/completion to the earliest. Yard and ABB have finally settled to have ABB's own group install drive. Ship will be ready to float next week as per last meeting.

Terry Fox:

Non-operational all week. Drydocked at Newdock for annual regulatory refit. Completion date Jan 10th.

Pearkes:

Non-operational all week. Refit in St. John's. Schedule has slipped due to Speedcrane and Bridge electronics install. Both jobs were supposed to finish on refit end date of Nov 14, then a week of inspections and load line. Date for return to service now Dec 1. Working on improving.

Earl Grey:

Non-operational all week. Refit at BIO. Going well. Due to finish at Dec 17th.

Cygnus:

Non-operational all week. Drydocked at Newdock. Due to complete Dec 1. Additional 2 weeks lost time from non-functioning lathe to machine shaft and stern bearings. This machine work in in progress from outside contractor.

Harp:

Non-operational all week. Port Gearbox issues. Secured at St. John's. Gearbox has been shipped out to contractor for repairs. Expect it returned by next weekend to install.

McLaren:

Non-operational since Wednesday. Started refit at CME dock.

Clarke's Hr:

Non-operational all week. Refit at Samsons complete. Sea trials today..

Spray:

Non-operational all week. Returned to BIO for second part of refit. Engine rebuilds as required by TC. Going well.

If anyone has any further questions please do not hesitate to contact me.

Subject: Friday Update ME

Friday Update from ME:

Ann Harvey:

Non-operational all week. Drydocked at Verreault shipyard. The CCGS Ann Harvey has significant delays from the original schedule based on our Progress Meeting. End of February estimated delivery/completion to the earliest pending engines are fully installed and ready to run early Jan for commissioning. Yard and ABB have finally settled to have ABB's own group install drive. Waiting on Main Engines and Drive. Serious lack of manpower reported this past month with lots of outstanding work to complete in yard.

Terry Fox:

Non-operational all week. Drydocked at Newdock for annual regulatory refit. Completion date Jan 10th.

Pearkes:

Non-operational all week. Refit in St. John's. Schedule has slipped due to Speedcrane re assembly and Bridge VLE electronics install. Both jobs were supposed to finish on refit end date of Nov 14, then a week of inspections and load line. Crane boom being installed Monday with all blocks attached. Should be complete with all wires on by next weekend. Engine room inspections being done on Monday. Date for return to service now slated for Dec 1. Working on improving with extra resources.

Earl Grey:

Non-operational all week. Refit at BIO. End date has slipped as a result of growth of steelwork, schedule has been extended 2 weeks with a new completion date of December 31st. Steel work in the stair tower of boat deck and around the bridge windows is the delay identified.

Cygnus:

Non-operational all week. Drydocked at Newdock. Due to complete Dec 1. Lost time on yard lathe issues and now a second shaft machining requirement has added a few more days to end date. Liners are now being machined for shaft install. Latest date from yard is now Dec 5th.

Harp:

Non-operational all week. Port Gearbox issues. Secured at St. John's. Gearbox has been shipped out to contractor for repairs. Expect it returned by next week to install.

McLaren:

Non-operational all week. Refit at CME Sambro.

Clarke's Hr:

Non-operational all week. Clark's Hr arrived back home Nov 15th late night. ME are sourcing contractors for early next week to address recent port engine fuel issues, steering issues and bilge cleaning before returning to service to ensure reliability. Vessel will be ready for open of fishery as per plan.

Spray:

Non-operational all week. Returned to BIO for second part of refit. Engine rebuilds as required by TC. Going well. Two weeks remaining.

If anyone has any further questions please do not hesitate to contact me.

The flowing is the preliminary recovery plan for the MSPV Corp McLaren, produced by Raymond Gallant, P.Eng (CME) and reviewed by Tim Haggart, P.Eng, Nav Arch., and Les Strong, Senior Engineering Technologist

- RMI diving company have been engaged to asses the vessel in its current state
- Allswater naval architecture is on site to provide guidance and over sight in regards to the recovery plan.
- CME will add additional securing lines to the vessel and the cradle
- Know water ingress points on vessel:
 - Rudder stock
 - Over boards
 - Sea chests
 - Sea valves
 - Fuel vents
 - Ballast Vents
 - Hatches
- RMI will place divers in water to plug or close the water ingress points
- The hauling cable that was cut will be reeved back into position to secure the cradle
- Pumps suction lines will be placed in the vessel to begin the dewatering
- Ships condition will be monitored during the dewatering by CME engineers and Allswater
- Dewatering will right the vessel
- Tugs will be in place to receive the vessel.
- The vessel will be towed to the government wharf in Sambro, NS
- A team of CME and TC and CCG will be placed on vessel to begin assessing the damage and repair plan
- The cradle will be assessed, reinstalled on the track and blocked to receive the vessel.
- The vessel will be redocked at the yard for full damage assessment
- Updates to this plan will be continuous during the process. CCG will be in constant contact with CME for information as to the progress.

Hi Mihai,
I just spoke to [REDACTED] ABS country manager and he confirmed the vessel is handed over to ABS, all paperwork is in place.
Therefore once the vessel is secured at the wharf then ABS will attend for damage survey.
Picture in link below. Damage will be extensive, ER flooded I should think.
Best regards, simon

Until the RCMP confirm it was vandalism, I don't think we should use the term. As a compromise, perhaps we can state that the incident is under investigation or state suspected vandalism?

Just my thoughts.

CME has requested that the CCG update the twitter posts to change the focus from “accident” to “vandalism”. Acting Captain John Walker just left a message on Steven’s phone.

Confirmed - CME made a statement that it was vandalism, rather than an accident. Did not provide any further details as it was under active police investigation.

They spoke to ensure that there were no injuries and they are working to ensure everybody's safety and that of the environment.

Subject: RE: APPROVED with Minor Edits: FOR URGENT APPROVAL: Proposed Media Response -- Damage to CCGS Corporal McLaren M.M.V.

Clean copy of messaging below

Issue: Damage to CCGS Corporal McLaren M.M.V.

Background: This morning (November 17), The Regional Operations Centre was advised of damage to the CCGS Corporal McLaren. The vessel had been in refit in Sambro, NS at Canadian Maritime Engineering Ltd. Sometime overnight the vessel slid down out of its secured holding cradle, hit the water and rolled over. The incident is presently under investigation. Vessel currently on its side partially submerged. RCMP are involved as there is a suspicion of vandalism (unconfirmed). Media attention is anticipated.

Recommendation: Spokesperson (TBC) will be on site at the shipyard and will respond to media inquiries using the below media lines. Questions regarding the shipyard and its operations will be directed to Kevin Gallant, Shipyard Manager [REDACTED].

The below messages and attached photo will be used to create social media content if required.

Approved By: (TBC)

Proposed Response:

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the vessel was released from its secured cradle and slid down the slip.
- The vessel hit the water and turned on its side. The vessel is currently partially submerged on its starboard side.
- Coast Guard and shipyard personnel will inspect the vessel as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Subject: REVISED: Update tweet

HARVEY – what about the revised below?

Suggested REVISED tweet below. M-E to update the french one.

#CCGLive: Update on CCGS Corporal McLaren - currently partially submerged at a shipyard in Sambro, #NovaScotia. Containment boom in place and our Environmental Response crew continues to monitor the site. We are working closely with partners to determine the cause of the incident and with the ship yard as they mobilize with a salvage plan.

Thank you | merci

I propose some edits:

Approved by Acting AC

One media call - CTV Atlantic. They have details as it is being discussed on social media

Issue: Damage to CCGS Corporal McLaren M.M.V.

Background: This morning (November 17), The Regional Operations Centre was advised of damage to the CCGS Corporal McLaren. The vessel is in refit in Sambro, NS at Canadian Maritime Engineering Ltd. Sometime overnight the vessel slid down out of its secured holding cradle, hit the water and rolled to its side. The incident is presently under investigation. Vessel currently on its side partially submerged, and boomed. RCMP are involved as there is a suspicion of vandalism (unconfirmed). Media attention is anticipated.

Recommendation: Spokesperson (TBC) will be on site at the shipyard and will respond to media inquiries using the below media lines. Questions regarding the shipyard and its operations will be directed to Kevin Gallant, Shipyard Manager [REDACTED]

The below messages and attached photo will be used to create social media content if required.

Approved By: Ann Margaret-White Acting AC

Proposed Response:

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the ship was released from its secured cradle and slid down the slip.
- The ship hit the water and turned on its side. It is currently partially submerged on its starboard side. The ship has been boomed off to ensure no impacts to the environment.
- Coast Guard and shipyard personnel will inspect the ship as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Cc: McDonald, Heather
Subject: updated lines on McLaren for regional approvals

Hi Steve – Here are some lines I've drafted based on what I just heard ... can you pls confirm the info on interviews and seek approval on your end? I will run through my end after. Thanks!

Media interest/interviews:

- Capt. Wilke did two interviews (can you pls confirm which outlets) CBC and Chronicle Herald
 - Deputy Superintendent of ER, Keith Laidlaw did one interview about the ER operation
 - CME spokesperson did one interview in which they said it was an act of vandalism or sabotage

For approval: Update Saturday, Nov. 17 3:00pm:

- Efforts are underway to assess the damage to ship and determine if this incident will affect its planned return to service in mid-December.
- At this point, there is no immediate impact on planned operations, but we will be considering contingencies in case they are needed.
- The Canadian Coast Guard is working closely with the other parties involved including:
 - Canadian Maritime Engineering (owner of Sambro Shipyard) as they develop a salvage plan;
 - Transport Canada and Environment and Climate Change Canada; and
 - Halifax Regional Police Force who is investigating the cause of the incident.

Previously Approved (Saturday, Nov. 17 noon):

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro, NS to begin a scheduled refit.

- Sometime overnight (night of November 16) the ship was released from its secured cradle and slid down the slip.
- The ship hit the water and turned on its side. It is currently partially submerged on its starboard side. The ship has been boomed off to ensure no impacts to the environment.
- Coast Guard and shipyard personnel will inspect the ship as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Subject: FW: Immediate Notification of Event - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

See reference to amount of fuel on board. Steps being taken to contain potential spill.

Description of threat/event: At 1200 UTC , Nov 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.

Anticipated Media Attention: High. Stephen Bornais, DFO Maritimes Communications Advisor, currently working on communication lines.

Program Reporting: Fleet Atlantic

Current CCG Actions: FEMP has been activated. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately.

Current Actions (other): RCMP contacted to investigate.

Initial analysis/impact assessment on CCG: C&P Program will be affected due to vessel delay in return to service (RTS).

Notification provided to: FEMP Distribution

Next Steps: Marine Engineering / Environmental Response to assess the situation to determine damage to vessel.

DISCLAIMER **This Information is preliminary and subject to change. Further, the information given for some occurrences may not have been verified / validated by CCG. Therefore, caution should be used when using this information.

Hi Ann-Margaret/Don,

The NIMT is stood up, and we'd like to work into your FEMP briefing cycle to get the latest info on the ground- and to provide you what support we can from National.

I understand you have a FEMP briefing early this afternoon - and i'd like to set up a call with you afterwards if possible to get your latest info so we can continue to feed info up the chain.

Can you please let me know what time is good for you and i'll have the NCC set up the call.

Thank-you,
Ryan

Wade – A/DC Ops,

- 17/0800 AST: Local fire department advises CCG that *CCGS Corporal MacLaren*, in refit in Sambro, is in the water.
- ROC Atlantic advised and contacted CCGS Sambro Captain Peters to assess and confirm. Early follow up is that vessel seems to have slipped off slipway and now stern is in the water back to the wheelhouse.

- ROC has advised MacLaren crew to report to vessel ASAP.
- Few details available at this time – ROC investigating.
- SRD Atlantic aware and working with ROC.
- Photos to be provided. NCC to be advised.
- A/RD IM Vardy – Heads up.

From: MacDonald, Heidi <Heidi.MacDonald@dfo-mpo.gc.ca>
Sent: Saturday, November 17, 2018 9:47 AM
To: Bornais, Stephen
Subject: FOR URGENT APPROVAL: Proposed Media Response -- Damage to CCGS Corporal McLaren M.M.V.

Issue: Damage to CCGS Corporal McLaren M.M.V.

Background: This morning (November 17), The Regional Operations Centre was advised of damage to the CCGS Corporal McLaren. The vessel had been in refit in Sambro, NS at Canadian Maritime Engineering Ltd. Sometime overnight the vessel slid down out of it's secured holding cradle, hit the water and rolled over. The incident is presently under investigation. Vessel currently on its side partially submerged. RCMP are involved as there is a suspicion of vandalism (unconfirmed). Media attention is anticipated.

Recommendation: Spokesperson (TBC) will be on site at the shipyard and will respond to media inquiries using the below media lines. Questions regarding the shipyard and its operations will be directed to Kevin Gallant, Shipyard Manager [REDACTED].

The below messages and attached photo will be used to create social media content if required.

Approved By: (TBC)

Proposed Response:

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the vessel was released from its secured cradle and slid down the slip.
- The vessel hit the water and turned on its side. The vessel is currently partially submerged on its starboard side.
- Coast Guard and shipyard personnel will inspect the vessel as soon it's safe to do so.

Cc: Bornais, Stephen; Llewellyn, Don; Vardy, Harvey; LeBlanc, Brian (Executive Director, CCGC)
Subject: Media Conducted by LEAD CG and CCG ER Ops Only: CCGS Corporal McLaren M.M.V.

Interviews completed by CCG Atlantic Region Lead, Captain Greg Wilkie to 17/1400 AST:

- Interview with Mairin Prentiss from CBC English Radio/Video (questions were as anticipated)
- Interview with Ryan Taplin, Chronicle Herald, audio only.
- Also, Deputy Superintendent ER, Keith Laidlaw, spoke with a reporter on scene who requested a comment from ER crew. Laidlaw spoke to those operations only.

DFO Maritimes Communications Senior Advisor, Stephen Bornais will track and advise accordingly.

Note: Captain Wilkie advised at 171410AST that:

- CME has made a statement to media that it was vandalism, rather than an accident. Did not provide any further details as it was under active police investigation. They spoke to ensure that there were no injuries and they are working to ensure everybody's safety and that of the environment.

Sent: November-17-18 4:48 PM
To: CCG ATL ROC / COR ATL GCC (DFO/MPO); Laidlaw, Keith
Subject: Corporal McLaren

Here is a list of points from CCG ER for the next Sitrep regarding the Corporal McLaren.

- CCG ER on site as of 1110LT
- Pollutants on Board:
 - 3 fuel tanks holding a combined amount of approximately 2600 litres
 - 2 hydraulic tanks with approximately 200 litres in each tank
- 1150LT first media interview was conducted with several taking place throughout the day, interviews with CTV and CBC
- Transport Canada duty officer notified at 1024LT
- DFO and ECCC notified and have been requested to provide sensitivity mapping of the area.
- RMI marine salvage company is currently on site and conducting hull survey
- 1500LT teleconference held between CCG Fleet, CCG ER, ROC and CME. Teleconference was in reference to the salvage plan.
- CCG ER and CCG Fleet to remain in command and control of the incident. CCG ER and CCG Fleet will remain on site throughout the operations.

Subject: INITIAL INCIDENT NOTIFICATION - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

This NINP has been approved for distribution by RD Fleet and A/AC

Description of threat/event: At 1200 UTC , Nov 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.

Anticipated Media Attention: High. Stephen Bornais, DFO Maritimes Communications Advisor, currently working on communication lines.

Program Reporting: Fleet Atlantic

Current CCG Actions: FEMP has been activated. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately.

Current Actions (other): RCMP contacted to investigate.

Initial analysis/impact assessment on CCG: C&P Program will be affected due to vessel delay in return to service (RTS).

Notification provided to: FEMP Distribution

Next Steps: Marine Engineering / Environmental Response to assess the situation to determine damage to vessel.

*DISCLAIMER **This Information is preliminary and subject to change. Further, the information given for some occurrences may not have been verified / validated by CCG. Therefore, caution should be used when using this information.*

This NINP Sitrep # 1 has been approved for distribution by RD Fleet and A/AC

NATIONAL INITIAL INCIDENT NOTIFICATION Sitrep # 1 - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 1200 UTC, Nov 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 1200 UTC , Nov 17, 2018
4. Primary Department(s)/Agency(s): CCG Atlantic Region
5. Supporting Departments/Agencies: NCC, 17 November Halifax Regional Police Department.
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC,1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained.
8. Actions Taken ; RCMP contacted to investigate. Halifax Regional Police, not RCMP, on site to investigate.
9. Media/Public Communications: High. Stephen Bornais, DFO Maritimes Communications Advisor, prepared communications lines working their way through approvals. DFO Communications have been contacted CTV News. CTV News are on site.

10. Activities Next 24 Hours: Marine Engineering, CCG Atlantic, and Environmental Response to assess the situation to determine damage to vessel. Divers were contacted by yard, divers enroute to vessel to plug holes and deploy airbags. Estimated 3 to 4 days before vessel is back in cradle.

11. Environmental Factors: 1000 ft. Boom deployed around vessel, ER Deputy Superintendent, Marine Engineering and two ER Response Specialists on site. Tides are rising and light onshore winds.

12. Significant Issues: Probable Program impacts to C & P

13. Personnel Status:

a. CCG: N/A

b. Others: N/A

14. Equipment Status:

a. CCG: N/A

b. Others: N/A

15. New Requirements: N/A

16. Command Assessment: Superintendent ROC

Subject: updated lines on McLaren for regional approvals

Hi Steve – Here are some lines I've drafted based on what I just heard ... can you pls confirm the info on interviews and seek approval on your end? I will run through my end after. Thanks!

Media interest/interviews:

- Capt. Wilke did two interviews (can you pls confirm which outlets) CBC and Chronicle Herald
 - Deputy Superintendent of ER, Keith Laidlaw did one interview about the ER operation
 - CME spokesperson did one interview in which they said it was an act of vandalism or sabotage

For approval: Update Saturday, Nov. 17 3:00pm:

- Efforts are underway to assess the damage to ship. The impact to program can not be determined at this time until the extent of the damage is ascertained.
- At this point, there is no immediate impact on planned operations, but we will be considering contingencies in case they are needed.
- The Canadian Coast Guard is working closely with the other parties involved including:
 - Canadian Maritime Engineering (owner of Sambro Shipyard) as they develop a salvage plan;
 - Transport Canada and Environment and Climate Change Canada; and
 - Halifax Regional Police Force who is investigating the cause of the incident.

Previously Approved (Saturday, Nov. 17 noon):

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro, NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the ship was released from its secured cradle and slid down the slip.
- The ship hit the water and turned on its side. It is currently partially submerged on its starboard side. The ship has been boomed off to ensure no impacts to the environment.
- Coast Guard and shipyard personnel will inspect the ship as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Those are very good additions and helpful.

The MLs were shared in advance so that those who will receive these momentarily have them early enough to consider how we can best articulate all the action that has been taken in the past 12 hours.

Subject: Re: HEADS UP: Updated MLs through Approvals: McLaren

Folks, we need to accelerate the media lines process. CBC has updated twice since our last approved lines. Our lines look a little disconnected from what's happening online. I'd add lines that the coast guard has posted a security watch and has an ER team on site to monitor 24/7. I'd emphasize full support for the investigation.

I am very mindful that you have your hands full so please know that I am not being critical. How can we help?

Folks,

I have approved these regionally. They will soon get underway through Comms process for approval.

Regards,
AM White
A/AC

Media interest/interviews:

• Capt. Wilke did two interviews - CBC and Chronicle Herald.

- Deputy Superintendent of ER, Keith Laidlaw did one interview about the ER operation
- CME spokesperson did one interview in which they said it was an act of vandalism or sabotage

Approved Regionally. DFO Comms M will route onward for approval: Update Saturday, Nov. 17 3:00pm:

- Efforts are underway to assess the damage to ship. The impact to program cannot be determined at this time until the extent of the damage is ascertained.
- At this point, there is no immediate impact on planned operations, but we will be considering contingencies in case they are needed.
- The Canadian Coast Guard is working closely with the other parties involved including:
 - o Canadian Maritime Engineering (owner of Sambro Shipyard) as they develop a salvage plan;
 - o Transport Canada and Environment and Climate Change Canada; and
 - o Halifax Regional Police Force who is investigating the cause of the incident.

Previously Approved (Saturday, Nov. 17 noon):

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro, NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the ship was released from its secured cradle and slid down the slip.
- The ship hit the water and turned on its side. It is currently partially submerged on its starboard side. The ship has been boomed off to ensure no impacts to the environment.
- Coast Guard and shipyard personnel will inspect the ship as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Hi Terry and Ravi,

We haven't officially been asked to assist but we want to be ready to respond as quickly as possible if needed. As Natasa mentioned, info regarding the tanks and weights status at the time of the incident will be really helpful. However, we know that the Regional personnel involved with the ship will be really busy right now, but if this info is readily available because it was prepared for the haulout, it would be invaluable to any stability assessment.

Thanks,
Tracey

Report on Corporal McLaren Incident November 17, 2018

Received a call from Bill LeBlanc at 8:07am to let me know that the Corporal McLaren was in the water on her Starboard Side.

Call Jeff Mercier at 8:09am to inform him that the Corporal McLaren was in the water on her starboard side and that I was heading out shortly and would pick him up along the way.

Called Terry Hunt at 8:10am to let him know the Corporal McLaren was in the water on her starboard side and possibly ½ to 2/3 submerged.

At 8:30am I was on the road to CCG building to pick up a vehicle and some items, picked up Jeff Mercier around 9:10 am and headed to the CME ship yard in Sambro. Arrived around 9:35 and met with ship's crew.

Viewed the vessel and took pictures and sent along to Terry Hunt – it appears that the main cable was cut and the backup line appears to have been cut – one strand and the remainder seems to have snapped under the weight. Additional lines on the rail way were also snapped. The shore power cable was torn from the vessel.

CME call HRM police to come and investigate the incident.

10:00am Met with Tony Kennedy (CME), Dean Mitchell (CME) and Ray Gallant (CME) and Jeff Mercier (CCG) to get a debrief on what they planned to do to get the vessel upright and see if they had any security evidence as to what happened. We had an impromptu teleconference with Terry Hunt, Don Llewellyn and other CCG personnel shortly after.

CME has video surveillance and are in the process of reviewing and trying to get information from their hard drives.

CCG Corporal McLaren Captain wanted to retrieve the onboard video drives, but was stood down – CME were very interested in getting the drive and went aboard and retrieved it. The drive is now in CCG possession – it is presently located on my desk on the 4th floor of the CCG HQ building. Jeff Mercier talked to James Jardim and has made plans to get the information from the drive on Monday.

Had a discussion with Tony Kennedy and Ray Gallant concerning a salvage report, Ray was working on it and had call in Tim Haggart and engineer with Allswater Marine Consultants to help with the development of the salvage plan. Ray said he would have a preliminary report to me by 4pm.

Dean Mitchell has arranged for 24/7 security stating this afternoon.

Jeff Mercier and I left the ship yard at 12:10

Paul Bowman (PSPC) called me around 1:00pm – heard about the Corporal McLaren on the news - brought him up to speed on what was going on.

Terry

Here is my draft report for today

Haven't heard anything yet from CME – will call them around 4pm to see if they have a draft salvage report for us – will let you know

Thanks

The flowing is the preliminary recovery plan for the MSPV Corp McLaren, produced by Raymond Gallant, P.Eng (CME) and reviewed by Tim Haggart, P.Eng, Nav Arch., and Les Strong, Senior Engineering Technologist

- RMI diving company have been engaged to asses the vessel in its current state
- Allswater naval architecture is on site to provide guidance and over sight in regards to the recovery plan.
- CME will add additional securing lines to the vessel and the cradle
- Know water ingress points on vessel:
 - Rudder stock
 - Over boards
 - Sea chests
 - Sea valves
 - Fuel vents
 - Ballast Vents
 - Hatches
- RMI will place divers in water to plug or close the water ingress points
- The hauling cable that was cut will be reeved back into position to secure the cradle
- Pumps suction lines will be placed in the vessel to begin the dewatering
- Ships condition will be monitored during the dewatering by CME engineers and Allswater
- Dewatering will right the vessel
- Tugs will be in place to receive the vessel.
- The vessel will be towed to the government wharf in Sambro, NS
- A team of CME and TC and CCG will be placed on vessel to begin assessing the damage and repair plan
- The cradle will be assessed, reinstalled on the track and blocked to receive the vessel.
- The vessel will be redocked at the yard for full damage assessment
- Updates to this plan will be continuous during the process. CCG will be in constant contact with CME for information as to the progress.
- 24 hour surveillance on the vessel while it is at the Sambro Wharf
- Jeff Mercier will notify the classification society to be aware and participate in recovery
- A naval architect for CCG will be participating in the process.

Regards,

Raymond Gallant, P.Eng

Hi Keith,

I would recommend after dewatering stage, before towing to wharf, that we have any affected internal areas sprayed and flushed with fresh water to minimize salt residue and rapid corrosion. Electrical Components, Electrical cables, Machinery and Bulkhead Insulation would be a major concern.

My thoughts,

Terry Hunt

The ship yard was able to retrieve it before it was submerged – we would like it as soon as possible.

Hi Jeff, I just spoke with Daniel at the TSC about the McLaren. He mentioned you've removed the drives from the CCTV and may require assistance retrieving the data from the drives. I'm not in the office on Monday but can make arrangements to have this looked at. Feel free to give me a call.

James

"La Version francais suit au bas du message."

Hello James Jardim ,

This client has reported a problem - FLEET/FLOT - Fleet Systems

Client Centre - -

Reported at - 17/11/18 10:39 AM

Client Priority -

The problem reported is - C184 - Corporal McLaren - Retrieve ship camera recordings after vessel toppled over

Long Description -

Phone call from ROC Atlantic at 10:39AM on 2018-11-17

The ROC Atlantic called to report the following issue:

-Retrieve ship camera recordings after vessel toppled over

Of Interest:

I called all the techs on the volunteer callback list and left voicemails. I called the Atlantic ROC and Jeff Mercier, as he had also called the TSC, to let them know that I wasn't able to get a hold of a tech.

Action taken, Request is forwarded to - PG2172 - Dartmouth Technical Workshop Ship

Person who reported the problem - ROC Atlantic, Ph- (709) 772-5477, E-mail-

Affected User, Phone & Email - ROC Atlantic, Ph- (709) 772-5477, E-mail-

Workorder issued for this problem - W1366082

Ticket number issued for the client - SR62921

Service Level Resolution date - 17/11/18 11:39 AM

Subject: URGENT - Post Incident Plan - For your review and comment
Attachments: CCGS Corporal McLaren Post-Incident Plan.docx

I have been asked to propose a post-incident management structure to present to the Commissioner and Deputy Commissioners mid-day today. Although they were suggesting a full ICS stand-up, I do not feel it is absolutely necessary. Please review the attached and provide comments ASAP.

I would also like your thoughts on who can be the Post-Incident Management Lead (for lack of a better term).

Lastly, is there anyone I forgot to include?

Brian

CCGS Corporal McLaren Post-Incident Management

Draft v1 – November 18, 2018

The goal is to effectively manage and coordinate Coast Guard's actions post-incident to the November 17, 2018 event in which the CCGS Corporal McLaren was reported partially submerged in water after slipping of the cradle while in refit.

Leading up, the Fleet Emergency Management Plan (FEMP) was activated and defined the initial response to ensure the safety of the vessel, crew and the environment. Emergency Response activated their Incident Command System (ICS) and responded through the direction of an on-scene Incident Commander

The high-level document will define Coast Guard Atlantic Region's plan to move forward after the initial response, under FEMP and ICS, has been completed. It will ensure oversight and coordination of the various actions required to bring the vessel back into service, mitigate the impact to operations and to help ensure a similar incident will not occur.

1. Incident Summary

- 1.1. CCGS Corporal McLaren entered the Canadian Marine Engineering Ltd shipyard in Sambro, NS to begin a scheduled refit. Sometime during the night of November 16 the ship was released from its secured cradle and slid down the slip, turned on its side and was partially submerged. The ship was boomed off to ensure no impacts to the environment. The release of the vessel from the cradle was consider a criminal act and is currently being investigated by Halifax Police and the RCMP.
- 1.2. External and internal damage to the vessel is being assessed. The priority is to safely refloat the vessel and remove it from the water.

2. Coast Guard Action to Date:

- 2.1. Fleet Emergency Action Plan (FEMP) was activated on November 17, 2018 at 12:25 UTC.
- 2.2. Incident Command System was activated on November 17, 2018 by Environmental Response to minimize any effect of pollution, threat of pollution and to protect the environment and the Coast Guard vessel.

- 2.3. Security, environmental and refloating operations are ongoing at the scene of CCGS Corporal McLaren.

3. Post-Incident Management

- 3.1. **Immediate** – until the vessel is safely secured on land, repairs are initiated and any impact to operations is mitigated.

3.1.1. Atlantic Region will activate the **Regional Incident Management Team (RIMT)** on Monday November 19, 2018 – preliminary planning call will be held on Sunday November 18, 2018.

3.1.2. Responsibilities will include but are not limited to:

- Establishing objectives
- Developing action plans and tasking
- Functional management of activities
- Management support
- Media and public relations
- Documenting
- Coordination with OGDs, partners and stakeholders

3.1.3. RIMT members will include (may expand or contract as required):

- Assistant Commissioner (Team Lead)
- Senior Director Fleet (2IC)
- Regional Director Incident Management
- Regional Director Integrated Technical Services
- Regional Director Navigational Programs
- Regional Director Integrated Business Management Services
- Regional Director OPP Atlantic
- Manager, Coast Guard Safety and Security

- Superintendent of Environmental Response
- Superintendent of Marine Engineering
- Superintendent of the Regional Operations Centre
- Commanding Officer CCGS Corporal McLaren
- Other Regional and HQ personnel as required
- DFO Communications

3.1.4. RIMT will appoint a **Post-Incident Management Lead**, full time assignment, who will be responsible for coordination, tasking and

follow-up on the direction of the RIMT. The individual should also be capable of providing advice and guidance to the Team.

3.2. Near to Long-term – until the vessel is back in full operation.

3.2.1. A full Project Management Team will be established, terms of reference and scope to be determined.

3.2.2. Post-Incident Management control will be passed from RIMT to Project Management Team.

Good Afternoon,

Just wanted to notify you of the Security Incident as per subject line above.

Yesterday morning CG was advised that the vessel and slipway at CME Shipyard was compromised - resulting in the vessel being partially submerged on the damaged slipway. CG Regional Fleet Emergency Management Team was stood approximately 0900 hrs.

CME RCMP CG responded and the circumstance surrounding the event is currently being investigated by the RCMP. Other government agencies notified as well.

Kevin/Mike,

Here is the Draft NINP Sitrep #2 to be sent to Don and Ann Margaret for review/approval. Details from Don received last night have been incorporated. No real change in the situation since watch-turnover and no calls received. Sitrep needs to be sent out NLT 1230Z.

NATIONAL INITIAL INCIDENT NOTIFICATION Sitrep # 2 - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 1200 UTC, Nov 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 1200 UTC , Nov 17, 2018
4. Primary Department(s)/Agency(s): CCG Atlantic Region
5. Supporting Departments/Agencies: NCC, 17 November Halifax Regional Police Department, TC, ECCC
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC,1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER

response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained. Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). Science table contacted 17 November and has no issue with current situation. RMI Diving has been engaged and will assess vessel status and close/plug all water ingress points. Allswater Naval Architecture is on site to provide guidance and over sight of the salvage plan. CCG ER staff remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.

8. Actions Taken: RCMP contacted to investigate. Halifax Regional Police, not RCMP, on site to investigate.

9. Media/Public Communications: High. Stephen Bornais, DFO Maritimes Communications Advisor, prepared communications lines working their way through approvals. DFO Communications have been contacted CTV News. CTV News are on site. First media interview was conducted at 1150 (L) 18 November with several more taking place with CTV and CBC throughout the day.

10. Activities Next 24 Hours: Marine Engineering, CCG Atlantic, and Environmental Response to assess the situation to determine damage to vessel. Divers were contacted by yard, divers enroute to vessel to plug holes and deploy airbags. Estimated 3 to 4 days before vessel is back in cradle. Commence/continue de-watering process in an effort to right and refloat the vessel. Vessels condition will continue to be monitored by CCG ER, CME and Allswater. Dewatering will take place inside boomed area. Once refloated, vessel will be towed and secured at the government wharf in Sambro where CME, TC and CCG personnel will conduct damage assessment and begin formulation of repair plan. The cradle will also be assessed, reinstalled and blocked in preparation to again receive the vessel. Halifax Regional Police will continue with investigation.

11. Environmental Factors: 1000 ft. Boom deployed around vessel, ER Deputy Superintendent, Marine Engineering and two ER Response Specialists on site. Tides are rising and light onshore winds. Current wx mainly sunny, Temp 1 C, winds NW 20km/h, Tide ebbing, slack water at 1042 (LT).

12. Significant Issues: Probable Program impacts to C & P

13. Personnel Status:

a. CCG: N/A

b. Others: N/A

14. Equipment Status:

a. CCG: N/A

b. Others: N/A

15. New Requirements: N/A

16. Command Assessment: Superintendent ROC

Subject: Update Corporal McLaren incident

Good morning,

Today's operations at the Corporal McLaren incident are as follows:

- No on site operations since the last SitRep. Security maintained presence throughout the night.
- Three CCG ER employees will be on site to monitor the situation along with 3 ships crew.
- RCMP and Halifax Metro Police are expected to be on scene today to continue investigation. RCMP extended the offer of assistance in data recovery from vessel cameras.
- Transport Canada will be on site this morning to oversee operations.
- RMI and CME are planning to secure the slipway and remove all existing dangers/ hazards in the area.
- Divers will start removing all salvageable equipment under the vessel. This includes 8 prop blades which don't appear to be damaged after initial assessment.
- Plug and close all water ingress points including 3 sea chests, 3 valves starboard side, 5 valves port side, 2 rudder stocks, 4 wet exhaust, 1 depth sounder, possible one air intake on the starboard side crane.
- High capacity pumps are on site and will be set up in preparation for dewatering of the vessel.
- Plugs and patches are being fabricated on site for installation.
- No pollution observed on site this morning. Containment boom placed around vessel and dewatering will take place within the boom.
- No media present on site.

Favorable weather conditions throughout the day on site.

- NW winds 10-20 kts, clear skies and temperature just above freezing.

Subject: Update Corporal McLaren, November 18th, 2018, 1600 Local

Good Afternoon,

Please see below for update from the Corporal McLaren incident.

Actions taken:

- Three CCG ER employees are on site to monitor the situation along with 3 ships crew.
- 1 PSPC and 3 CG Marine Engineering were on site today.
- Hard drive for CCTV and the ships servers were removed from the vessel. The hard drives will remain in the possession of the Captain [REDACTED]
- RMI and CME secured the slipway and removed all existing dangers/ hazards in the area.
- Divers removed all salvageable equipment under the vessel. This includes 8 prop blades which don't appear to be damaged after initial inspection.
- High capacity pumps are on site and were be set up in preparation for dewatering of the vessel.
- Plugs and patches were fabricated on site for installation.
- Sorbent boom has been placed in the ship to collect any pollutants.
- CTV and The Chronical Herald were on site this morning and requested interviews from CME. There was no request for CG interviews.
- CME arranged for 24 hour private security on site.

Next 24 hours:

- Continuing to work on plugging and closing all water ingress points including 3 sea chests, 3 valves starboard side, 5 valves port side, 2 rudder stocks, 4 wet exhaust, 1 depth sounder, possible one air intake on the starboard side crane.
- Pump truck will be on site tomorrow, November 19th, 2018 to pump out pollutants in the engine room prior to dewatering the vessel.
- CG ER will be setting up a mobile command post (MCP) and location setup has been prearranged with CME.
- CG ER will be adding additional personnel to the incident to assist.

- If plugging and closing of all holes is completed tomorrow, CME is planning to dewater the vessel.
- After completion of dewatering, CME will clean and spray down the vessel with fresh water. CME is working on producing a procedure for wash down of vessel.

Good Morning,

For your review and approval.

Regards,

NATIONAL INITIAL INCIDENT NOTIFICATION Sitrep # 2 - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 1200 UTC, Nov 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 1200 UTC , Nov 17, 2018
4. Primary Department(s)/Agency(s): CCG Atlantic Region

5. Supporting Departments/Agencies: NCC, 17 November Halifax Regional Police Department, TC, ECCC
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC,1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained. Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). DFO Science table contacted 17 November and has no issue with current situation. RMI Diving has started to assess vessel status and will close/plug all water ingress points. Allswater Naval Architecture is on site to provide guidance and over sight of the salvage plan. CCG ER staff remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.
8. Actions Taken: RCMP contacted to investigate. Halifax Regional Police, not RCMP, on site to investigate.
9. Media/Public Communications: High. Stephen Bornais, DFO Maritimes Communications Advisor, prepared communications lines working their way through approvals. DFO Communications have been contacted CTV News. CTV News are on site. First media interview was conducted at 1150 (L) 18 November with several more taking place with CTV and CBC throughout the day.
10. Activities Next 24 Hours: Marine Engineering, CCG Atlantic, and Environmental Response to assess the situation to determine damage to vessel. Divers were contacted by yard, divers enroute to vessel to plug holes and deploy airbags. Estimated 3 to 4 days before vessel is back in cradle. Commence/continue de-watering process in an effort to right and refloat the vessel. Vessels condition will continue to be monitored by CCG ER, CME and Allswater. Dewatering will take place inside boomed area. Once refloated, vessel will be towed and secured at the government wharf in Sambro where CME, TC and CCG personnel will conduct damage assessment and begin formulation of repair plan. The cradle will also be assessed, reinstalled and blocked in preparation to again receive the vessel. Halifax Regional Police investigation is ongoing.
11. Environmental Factors: 1000 ft. Boom deployed around vessel, ER Deputy Superintendent, Marine Engineering and two ER Response Specialists on site. Tides are rising and light onshore winds. Current wx mainly sunny, Temp 1 C, winds NW 20km/h, Tide ebbing, slack water at 1042 (LT).
12. Significant Issues: Probable Program impacts to C & P
13. Personnel Status:
 - a. CCG: N/A
 - b. Others: N/A

14. Equipment Status:

a. CCG: N/A

b. Others: N/A

15. New Requirements: N/A

16. Command Assessment: Superintendent ROC

5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC, 1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained.

18/1230UTC - Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). DFO Science table contacted 17 November and has no issue with current situation. RMI Diving has started to assess vessel status and will close/plug all water ingress points. All water Naval Architecture is on site to provide guidance and over sight of the salvage plan. CCG ER staffs remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.

18/2030UTC- CCG ER employees, Corporal McLaren crewmembers, CCG Marine Engineering employees, and a PSPC representative are on site to monitor the situation. RMI and CME have secured the slipway and removed all existing dangers/ hazards in the area, divers have removed all salvageable equipment under the vessel. High capacity pumps are on site and are being set up in preparation for dewatering of the vessel. Plugs and patches are now fabricated and ready for installation. CME has arranged for 24 hour private security on site.
8. Actions Taken: Investigation and response efforts are ongoing.
9. Media/Public Communications: High. CTV and The Chronical Herald were on site this morning and requested interviews from CME. There was no request for CCG interviews.
10. Activities Next 24 Hours: Continuing to plug and close all water ingress points. Pump truck will be on site tomorrow, November 19th to pump out pollutants in the engine room prior to dewatering the vessel. CCG ER will be setting up a mobile command post (MCP) and location setup has been prearranged with CME. CCG ER will be adding additional personnel to the incident to assist. If plugging and closing of all holes is completed tomorrow, CME is planning to

dewater the vessel. After completion of dewatering, CME will clean and **spray down the vessel with fresh water**, CME is working on producing a procedure for wash down of vessel. SCR representative **will be on site tomorrow to advise of salvage plan implementation.**

11. Environmental Factors: 1000 ft. Boom deployed around vessel, **sorbent boom has been placed in the vessel to collect any pollutants.** Current weather: mainly sunny, Temp 2 C, winds NNW 15 km/h

2. Incident Category/Type: Type 4
3. Date/Time: 1200 UTC , Nov 17, 2018
4. Primary Department(s)/Agency(s): CCG Atlantic Region
5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC, 1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained.

18/1230UTC - Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). DFO Science table contacted 17 November and has no issue with current situation. RMI Diving has started to assess vessel status and will close/plug all water ingress points. All water Naval Architecture is on site to provide guidance and oversight of the salvage plan. CCG ER staffs remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.

18/2030UTC- CCG ER employees, Corporal McLaren crewmembers, CCG Marine Engineering employees, and a PSPC representative are on site to monitor the situation. RMI and CME have secured the slipway and removed all existing dangers/ hazards in the area, divers have removed all salvageable equipment under the vessel. High capacity pumps are on site and are being set up in preparation for dewatering of the vessel. Plugs and patches are now fabricated and ready for installation. CME has arranged for 24 hour private security on site.

8. Actions Taken: Investigation and response efforts are ongoing.

9. Media/Public Communications: High. CTV and The Chronical Herald were on site this morning and requested interviews from CME. There was no request for CCG interviews.

10. Activities Next 24 Hours: Continuing to plug and close all water ingress points. Pump truck will be on site tomorrow, November 19th to pump out pollutants in the engine room prior to dewatering the vessel. CCG ER will be setting up a mobile command post (MCP) and location setup has been prearranged with CME. CCG ER will be adding additional personnel to the incident to assist. If plugging and closing of all holes is completed tomorrow, CME is planning to dewater the vessel. After completion of dewatering, CME will clean and spray down the vessel with fresh water, CME is working on producing a procedure for wash down of vessel. SCR representative will be on site tomorrow to advise of salvage plan implementation.

11. Environmental Factors: 1000 ft. Boom deployed around vessel, sorbent boom has been placed in the vessel to collect any pollutants. Current weather: mainly sunny, Temp 2 C, winds NNW 15 km/h

12. Significant Issues: Probable Program impacts to C & P

13. Personnel Status:

a. CCG: N/A

b. Others: N/A

14. Equipment Status:

a. CCG: N/A

b. Others: N/A

15. New Requirements: N/A

16. Command Assessment: Superintendent ROC

Subject: Re: HEADS UP: Updated MLs through Approvals: McLaren

Folks, we need to accelerate the media lines process. CBC has updated twice since our last approved lines. Our lines look a little disconnected from what's happening online. I'd add lines that the coast guard has posted a security watch and has an ER team on site to monitor 24/7. I'd emphasize full support for the investigation.

I am very mindful that you have your hands full so please know that I am not being critical. How can we help?

Subject: HEADS UP: Updated MLs through Approvals: McLaren

Folks,

I have approved these regionally. They will soon get underway through Comms process for approval.

Regards,
AM White
A/AC

Media interest/interviews:

Capt. Wilke did two interviews - CBC and Chronicle Herald.

- Deputy Superintendent of ER, Keith Laidlaw did one interview about the ER operation
- CME spokesperson did one interview in which they said it was an act of vandalism or sabotage

Approved Regionally. DFO Comms M will route onward for approval: Update Saturday, Nov. 17 3:00pm:

- Efforts are underway to assess the damage to ship. The impact to program cannot be determined at this time until the extent of the damage is ascertained.
- At this point, there is no immediate impact on planned operations, but we will be considering contingencies in case they are needed.
- The Canadian Coast Guard is working closely with the other parties involved including:
 - o Canadian Maritime Engineering (owner of Sambro Shipyard) as they develop a salvage plan;
 - o Transport Canada and Environment and Climate Change Canada; and
 - o Halifax Regional Police Force who is investigating the cause of the incident.

Previously Approved (Saturday, Nov. 17 noon):

- Earlier this week the CCGS Corporal McLaren entered the Canadian marine engineering Ltd shipyard in Sambro, NS to begin a scheduled refit.
- Sometime overnight (night of November 16) the ship was released from its secured cradle and slid down the slip.
- The ship hit the water and turned on its side. It is currently partially submerged on its starboard side. The ship has been boomed off to ensure no impacts to the environment.
- Coast Guard and shipyard personnel will inspect the ship as soon it's safe to do so.
- Coast Guard Environmental Response personnel have been deployed to prevent any risk to the marine environment.

Subject: Update Corporal McLaren incident

Good morning,

Today's operations at the Corporal McLaren incident are as follows:

- No on site operations since the last SitRep. Security maintained presence throughout the night.
- Three CCG ER employees will be on site to monitor the situation along with 3 ships crew.
- RCMP and Halifax Metro Police are expected to be on scene today to continue investigation. RCMP extended the offer of assistance in data recovery from vessel cameras.
- Transport Canada will be on site this morning to oversee operations.
- RMI and CME are planning to secure the slipway and remove all existing dangers/ hazards in the area.
- Divers will start removing all salvageable equipment under the vessel. This includes 8 prop blades which don't appear to be damaged after initial assessment.
- Plug and close all water ingress points including 3 sea chests, 3 valves starboard side, 5 valves port side, 2 rudder stocks, 4 wet exhaust, 1 depth sounder, possible one air intake on the starboard side crane.
- High capacity pumps are on site and will be set up in preparation for dewatering of the vessel.
- Plugs and patches are being fabricated on site for installation.
- No pollution observed on site this morning. Containment boom placed around vessel and dewatering will take place within the boom.
- No media present on site.

Favorable weather conditions throughout the day on site.

- NW winds 10-20 kts, clear skies and temperature just above freezing.

Wade – A/DC Ops,

- 17/0800 AST: Local fire department advises CCG that *CCGS Corporal MacLaren*, in refit in Sambro, is in the water.
- ROC Atlantic advised and contacted CCGS Sambro Captain Peters to assess and confirm. Early follow up is that vessel seems to have slipped off slipway and now stern is in the water back to the wheelhouse.
- ROC has advised MacLaren crew to report to vessel ASAP.
- Few details available at this time – ROC investigating.
- SRD Atlantic aware and working with ROC.
- Photos to be provided. NCC to be advised.
- A/RD IM Vardy – Heads up.

CCGS Corporal McLaren Incident Management

v3 – November 18, 2018

The goal is to effectively manage and coordinate Coast Guard's response to the November 17, 2018 incident in which the CCGS Corporal McLaren was reported partially submerged in water after slipping of the cradle while in refit.

This document will define Coast Guard Atlantic Region's plan to move forward. It will ensure oversight and coordination of the various actions required to bring the vessel back into service, mitigate the impact to operations and to help ensure a similar incident will not occur.

1. Incident Summary

- 1.1. CCGS Corporal McLaren entered the Canadian Marine Engineering Ltd shipyard in Sambro, NS to begin a scheduled refit. Sometime during the night of November 16th the ship was released from its secured cradle and slid down the slip, turned on its side and was partially submerged. The ship was boomed off to ensure no impacts to the environment. The release of the vessel from the cradle was consider a criminal act and is currently being investigated by Halifax Police and the RCMP.
- 1.2. External and internal damage to the vessel is being assessed. The priority is to safely refloat the vessel and remove it from the water.

2. Coast Guard Action to Date:

- 2.1. Fleet Emergency Action Plan (FEMP) was activated on November 17, 2018 at 12:25 UTC.
- 2.2. Environmental Response activated to minimize any effect of pollution, protect the environment and the Coast Guard vessel.
- 2.3. Security, environmental and refloating operations are ongoing at the scene of CCGS Corporal McLaren.

3. Incident Management – until the vessel is safe, secure and at no risk to the environment.

- 3.1. The Atlantic **Regional Incident Management Team (RIMT)** was activated on Sunday November 18, 2018 at Regional HQ in St. John's.
- 3.2. A full **Incident Command System (ICS)** Team will be activated on Monday November 19, 2018 to coordinate and manage the incident from an overall Coast Guard perspective, incorporating the Environmental Response (ER) Incident Action Plan that is currently in operation.
- 3.3. The **Incident Command Post (ICP)** will be established on-site at CCGS Corporal McLaren. It will be a **Single Command**.
- 3.4. **Incident Commander** will be Keith Laidlaw of Incident Management.
- 3.5. The responsibility for incident response management will move from Fleet to Incident Management and the ICS Team upon closing of the Fleet Emergency Management Plan (FEMP).

4. Post-Incident Management – until the vessel is back in full operation.

- 4.1. A full Project Management Team will be established, terms of reference and scope to be determined.
- 4.2. Post-Incident Management control will be passed from ICS Team to Project Management Team.

Peter,

Here is some preliminary analysis ran by Vladan yesterday. When you get onsite this morning please send along an update and provide Vladan with as much info as possible including the grounding point. I assume the divers would have a video / photos as well.

Thanks for responding and mobilizing so quickly.

Thanks,

Cliff

Subject: CCGS McLaren incident

Tracey and Cliff,

I tried to simulate CCGS McLaren incident in GHS, but I can't get the floating condition from the images and reports that were received today. Apparently, I'm missing some key information.

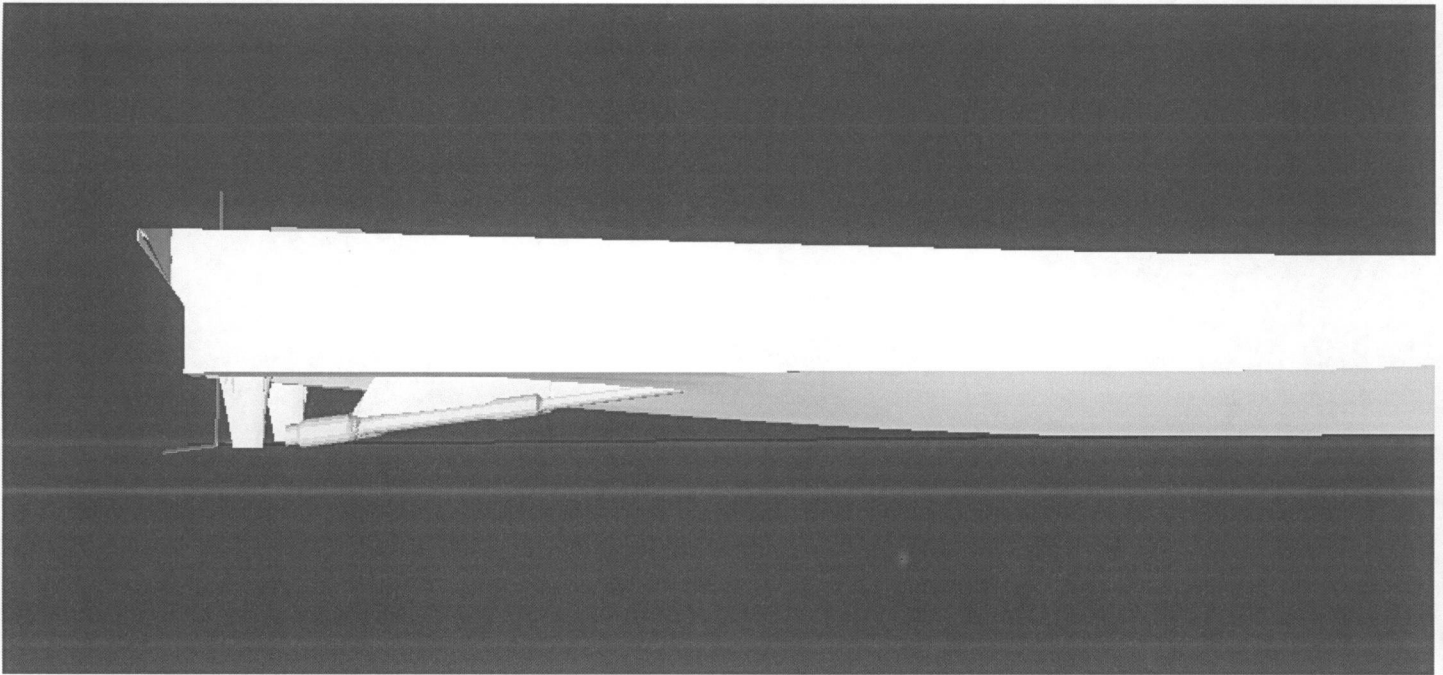

As per attached image vessel is listed at least 20 degrees. I assumed that the water ingress was through the stern tubes. I don't know how many compartments are flooded, but from the damage stability book vessel lists at a very small angle after the damage of any one or two subsequent watertight compartments. However, vessel capsizes if three aft compartments are flooded: steering gear, AMR and MMR. If this is the case vessel must have a grounding point somewhere along the bottom, and stays afloat. I'm guessing. If the ground point is at the stern, logical place for the ground point would be rudders. But there are two rudders, and the vessel is listed ? Also, water must be deep around the slipway, otherwise rudders would hit the ground while lifting up the slipway. Looks to me that the ground point might than be somewhere on the keel at the fore end. Please see the model below as an illustration of the potential ground point locations. A GHS simulation of the case with the three compartments flooded and the ground point on the keel at 33m fwd of frame 0 is attached.

My point here is to recommend extra caution during the salvage (recovery) operation, particularly if we have a case of the three compartments flooded.

Also, if Peter or Ravi can provide me tomorrow with more info on where the grounding point is I can refine my analysis and get more meaningful results.

Regards,
Vladan

Good morning,

Today's operations at the Corporal McLaren incident are as follows:

- No on site operations since the last SitRep. Security maintained presence throughout the night.
- Three CCG ER employees will be on site to monitor the situation along with 3 ships crew.
- RCMP and Halifax Metro Police are expected to be on scene today to continue investigation. RCMP extended the offer of assistance in data recovery from vessel cameras.
- Transport Canada will be on site this morning to oversee operations.
- RMI and CME are planning to secure the slipway and remove all existing dangers/ hazards in the area.
- Divers will start removing all salvageable equipment under the vessel. This includes 8 prop blades which don't appear to be damaged after initial assessment.
- Plug and close all water ingress points including 3 sea chests, 3 valves starboard side, 5 valves port side, 2 rudder stocks, 4 wet exhaust, 1 depth sounder, possible one air intake on the starboard side crane.
- High capacity pumps are on site and will be set up in preparation for dewatering of the vessel.
- Plugs and patches are being fabricated on site for installation.
- No pollution observed on site this morning. Containment boom placed around vessel and dewatering will take place within the boom.

- No media present on site.

Favorable weather conditions throughout the day on site.

- NW winds 10-20 kts, clear skies and temperature just above freezing.

Thanks,

Ben MacDonald

I have been asked to propose a post-incident management structure to present to the Commissioner and Deputy Commissioners mid-day today. Although they were suggesting a full ICS stand-up, I do not feel it is absolutely necessary. Please review the attached and provide comments ASAP.

I would also like your thoughts on who can be the Post-Incident Management Lead (for lack of a better term).

Lastly, is there anyone I forgot to include?

Brian

FYI

Preliminary Information I know so far.

All compartments are flooded.
There are 3 Grounding locations
One at the stern
One at frame 18 on a docking block
And one on the cradle at frame 29. I understand that this point spans to about 10 ft of contacts with the vessel.

Hi Vladan,

with regards to the write up below: Rudders were removed from the vessel, so ingress of water was likely through the rudder stock housing (plus all the E/R skin valves removed and exposed sea bays). Shafts and shafts seals were intact when incident occurred. It also appears that the stern frame might have been first to touch down, but not sure about this.

Subject: CCGS McLaren incident

Tracey and Cliff,

I tried to simulate CCGS McLaren incident in GHS, but I can't get the floating condition from the images and reports that were received today. Apparently, I'm missing some key information.

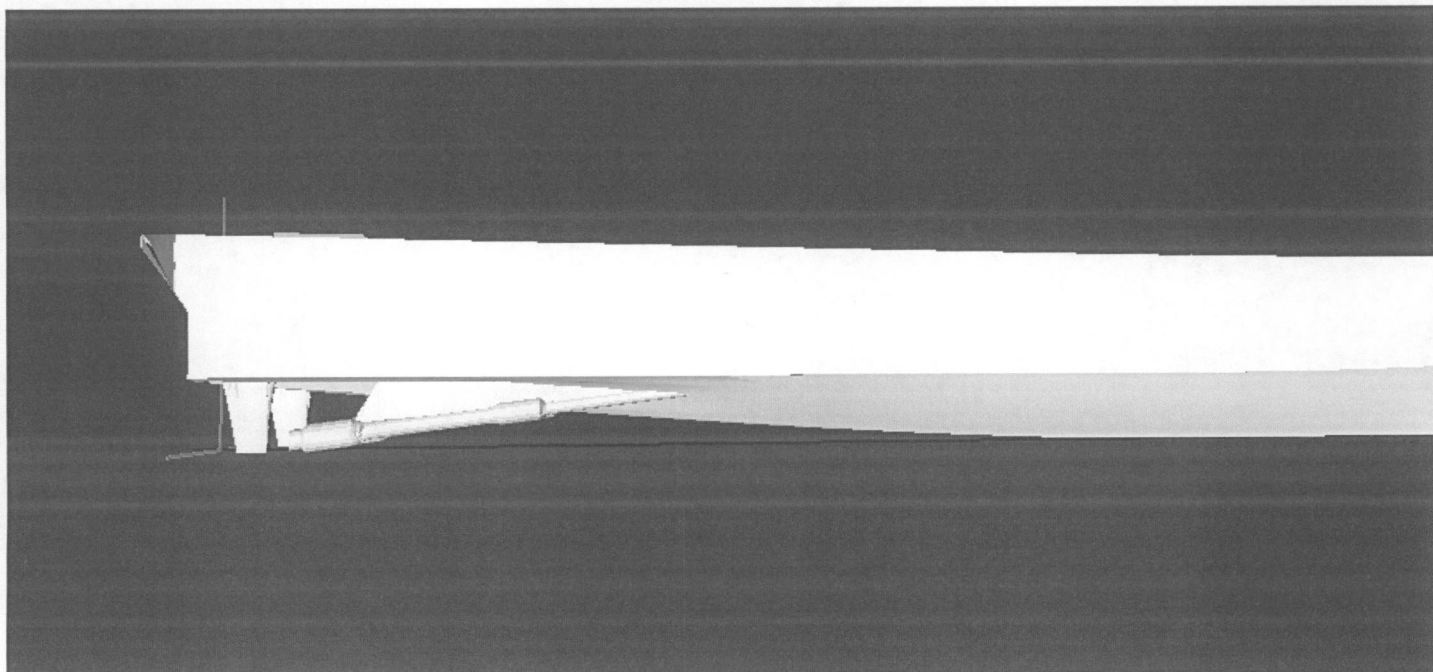

As per attached image vessel is listed at least 20 degrees. I assumed that the water ingress was through the stern tubes. I don't know how many compartments are flooded, but from the damage stability book vessel lists at a very small angle

after the damage of any one or two subsequent watertight compartments. However, vessel capsizes if three aft compartments are flooded: steering gear, AMR and MMR. If this is the case vessel must have a grounding point somewhere along the bottom, and stays afloat. I'm guessing. If the ground point is at the stern, logical place for the ground point would be rudders. But there are two rudders, and the vessel is listed ? Also, water must be deep around the slipway, otherwise rudders would hit the ground while lifting up the slipway. Looks to me that the ground point might than be somewhere on the keel at the fore end. Please see the model below as an illustration of the potential ground point locations. A GHS simulation of the case with the three compartments flooded and the ground point on the keel at 33m fwd of frame 0 is attached.

My point here is to recommend extra caution during the salvage (recovery) operation, particularly if we have a case of the three compartments flooded.

Also, if Peter or Ravi can provide me tomorrow with more info on where the grounding point is I can refine my analysis and get more meaningful results.

Hi Vladan,

Can you call me when you get a chance please.

Concerns about the vessel remaining stable and upright during the dewatering? Should the watertight doors be closed during the pumping out?

Thx,
Peter

Subject: CCGS McLaren incident

Tracey and Cliff ,

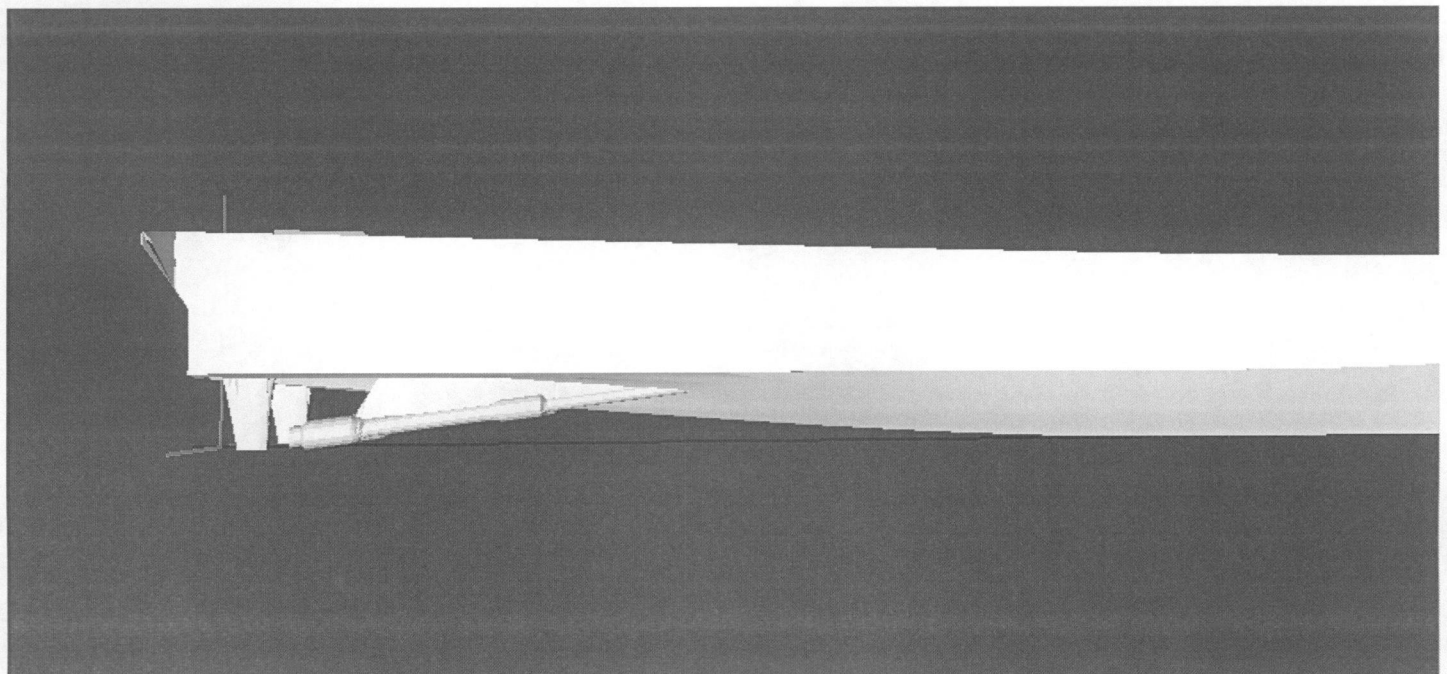

I tried to simulate CCGS McLaren incident in GHS, but I can't get the floating condition from the images and reports that were received today. Apparently, I'm missing some key information.

As per attached image vessel is listed at least 20 degrees. I assumed that the water ingress was through the stern tubes. I don't know how many compartments are flooded, but from the damage stability book vessel lists at a very small angle after the damage of any one or two subsequent watertight compartments. However, vessel capsizes if three aft compartments are flooded: steering gear, AMR and MMR. If this is the case vessel must have a grounding point somewhere along the bottom, and stays afloat. I'm guessing. If the ground point is at the stern, logical place for the ground point would be rudders. But there are two rudders, and the vessel is listed ? Also, water must be deep around the slipway, otherwise rudders would hit the ground while lifting up the slipway. Looks to me that the ground point might be somewhere on the keel at the fore end. Please see the model below as an illustration of the potential ground point locations. A GHS simulation of the case with the three compartments flooded and the ground point on the keel at 33m fwd of frame 0 is attached.

My point here is to recommend extra caution during the salvage (recovery) operation, particularly if we have a case of the three compartments flooded.

Also, if Peter or Ravi can provide me tomorrow with more info on where the grounding point is I can refine my analysis and get more meaningful results.

ER representative on site, Ben MacDonald, has confirmed that he was the hard drive under locked custody. There might possibly be water damage.

At this point, it is unknown if cameras were recording, to attain more detail regarding incident. RCMP have offered assistance with their forensic unit. Brian LeBlanc, A/AC, [REDACTED]

Milo: do you have any suggestions re: camera recording.

Thanks,

Jane.

Subject: RE: CCGS McLaren incident

Hi,

I have concluded work for today, will start again tomorrow morning.

Placed some photos of the CME facility in Sambro and the vessel as it lies in the water in the DSIP folder on the VMM drive, I can't really get much else will the ship being inaccessible at the moment.

The start of the dewatering may begin Monday, depends on some checks that will be completed. Also there is the CCG – Environmental Response Group whom will be setting up an Incident Command Centre on site (trailer?), for the pollution aspects of the vessel including the partial recovery of the fluids on the ship. London Offshore Consultants are being brought in to assist.

Will update tomorrow as the day moves along. Anticipate an update recovery plan tomorrow from CME.

Thanks,
Peter

Subject: CCGS McLaren incident

Tracey and Cliff ,

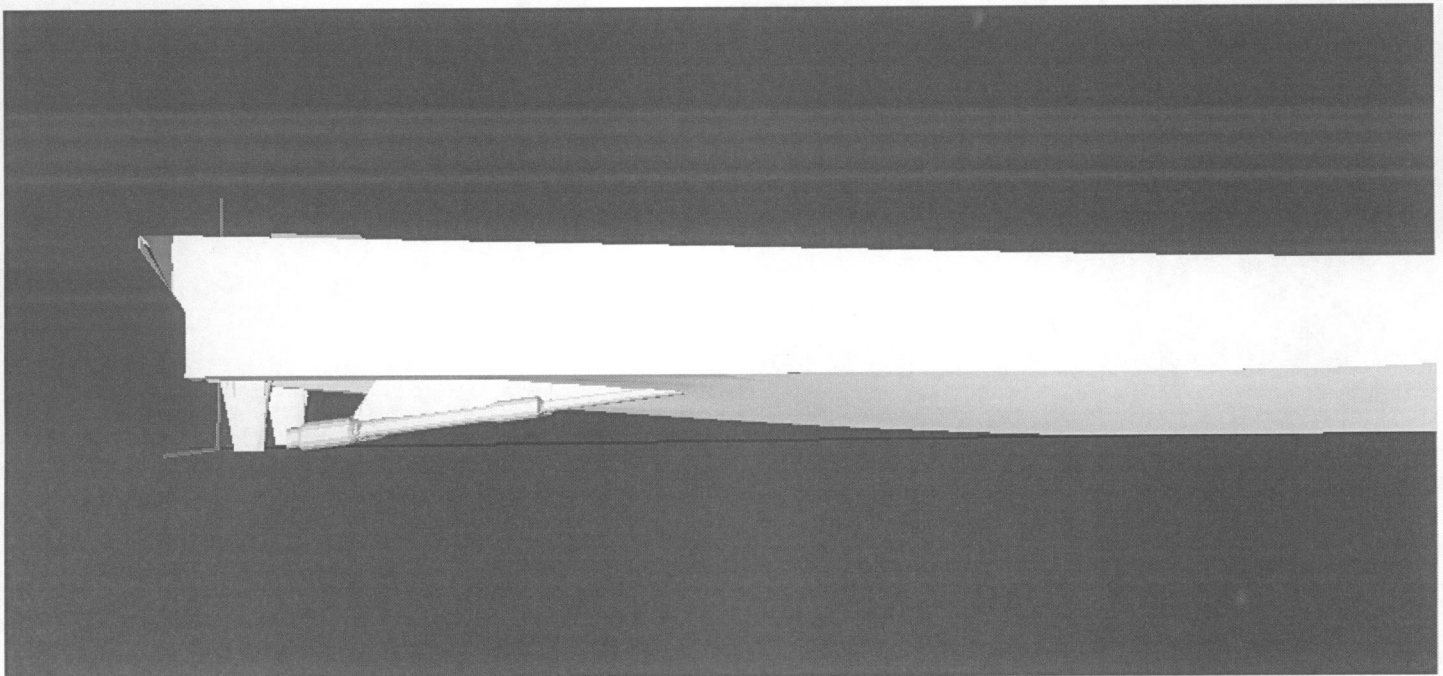

I tried to simulate CCGS McLaren incident in GHS, but I can't get the floating condition from the images and reports that were received today. Apparently, I'm missing some key information.

As per attached image vessel is listed at least 20 degrees. I assumed that the water ingress was through the stern tubes. I don't know how many compartments are flooded, but from the damage stability book vessel lists at a very small angle after the damage of any one or two subsequent watertight compartments. However, vessel capsizes if three aft compartments are flooded: steering gear, AMR and MMR. If this is the case vessel must have a grounding point somewhere along the bottom, and stays afloat. I'm guessing. If the ground point is at the stern, logical place for the ground point would be rudders. But there are two rudders, and the vessel is listed ? Also, water must be deep around the slipway, otherwise rudders would hit the ground while lifting up the slipway. Looks to me that the ground point might than be somewhere on the keel at the fore end. Please see the model below as an illustration of the potential ground point locations. A GHS simulation of the case with the three compartments flooded and the ground point on the keel at 33m fwd of frame 0 is attached.

My point here is to recommend extra caution during the salvage (recovery) operation, particularly if we have a case of the three compartments flooded.

Also, if Peter or Ravi can provide me tomorrow with more info on where the grounding point is I can refine my analysis and get more meaningful results.

The flowing is the preliminary recovery plan for the MSPV Corp McLaren, produced by Raymond Gallant, P.Eng (CME) and reviewed by Tim Haggart, P.Eng, Nav Arch., and Les Strong, Senior Engineering Technologist

- RMI diving company have been engaged to asses the vessel in its current state
- Allswater naval architecture is on site to provide guidance and over sight in regards to the recovery plan.
- CME will add additional securing lines to the vessel and the cradle
- Know water ingress points on vessel:
 - Rudder stock
 - Over boards
 - Sea chests
 - Sea valves
 - Fuel vents
 - Ballast Vents
 - Hatches
- RMI will place divers in water to plug or close the water ingress points
- The hauling cable that was cut will be reeved back into position to secure the cradle
- Pumps suction lines will be placed in the vessel to begin the dewatering
- Ships condition will be monitored during the dewatering by CME engineers and Allswater
- Dewatering will right the vessel
- Tugs will be in place to receive the vessel.
- The vessel will be towed to the government wharf in Sambro, NS
- A team of CME and TC and CCG will be placed on vessel to begin assessing the damage and repair plan
- The cradle will be assessed, reinstalled on the track and blocked to receive the vessel.
- The vessel will be redocked at the yard for full damage assessment
- Updates to this plan will be continuous during the process. CCG will be in constant contact with CME for information as to the progress.
- 24 hour surveillance on the vessel while it is at the Sambro Wharf
- Jeff Mercier will notify the classification society to be aware and participate in recovery
- A naval architect for CCG will be participating in the process.

Regards,

Raymond Gallant, P.Eng

Situational Awareness Briefing

SITREP #3

(CCGS Corporal McLaren submerged)

(November 18th , 2018)

Canada

OVERVIEW

Description of threat/incident:

- At 0800 local time, CCGS Corporal McLaren MMV reported partially submerged after slipping off the cradle at its refit location in Sambro, NS.
- 2000L of diesel fuel onboard.
- Damage to vessel reported

Geographic location of threat/incident:

- Sambro, NS

Departments/Agencies currently involved:

- Coast Guard
- RCMP/Halifax Regional Police Department
- Canadian Maritime Engineering (CME) shipyard
- Transport Canada (TC)
- Environment and Climate Change Canada (ECCC)
- Classification Society: American Bureau of Shipping (ABS)
- DFO Safety, Security and Emergency Services (SSES)

Current Situation (Vessel Status)

- Vessel is stable on the seabed, and has been secured in its current off-cradle position with approximately 100 cubic meters of water ingress.
- Initial assessment by divers report no damage to the hull.
- Small pollution release contained and pollution counter measures in place to prevent any further release. 1000 feet Boom deployed around the vessel.
- RMI and CME have secured the slipway and removed all existing dangers/ hazards in the area
- Divers have removed all salvageable equipment under the vessel.
- High capacity pumps are on site and are being set up in preparation for dewatering of the vessel. Plugs and patches are now fabricated and being installed.
- Coast Guard ER employees, Corporal McLaren crewmembers, Coast Guard Marine Engineering employees, and a PSPC representative are on site to monitor the situation.
- ER personnel and ship's crew monitoring the vessel 24/7.
- CME has hired a security firm to provide on-site 24/7 security.
- DFO and ECCC to provide sensitivity mapping of the area.

Current Situation (Plan)

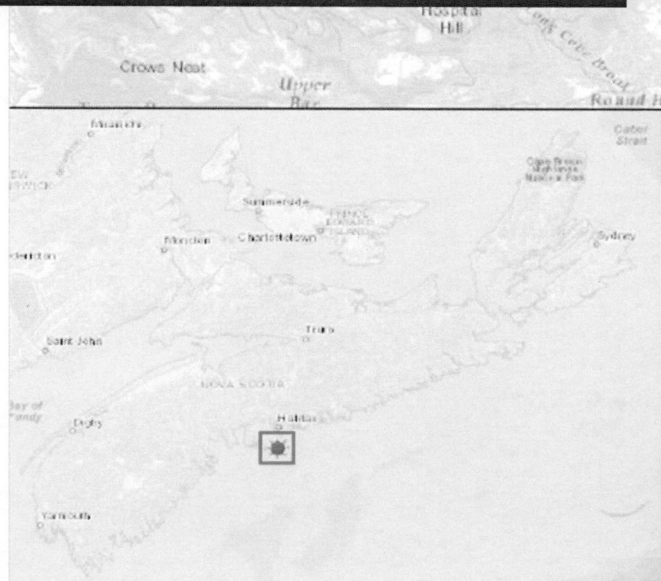

- FEMP (Fleet Emergency Management Plan) activated, but will turn over to Incident Command structure Mon 19 Nov.
- Coast Guard Incident Management will establish a Mobile Command Post on site at the CME ship yard in Sambro, N.S.
- RIMT activated to support Incident Commander.
- Initial salvage plan developed. Plan being reviewed by Transport Canada, Coast Guard, and Classification Society (ABS).
- Coast Guard has hired London Offshore Consulting (LOC) to provide advice on the CME's salvage plan, and provide Coast Guard with support and expertise over the course of the salvage.
- CME has hired All Water naval Architecture to provide CME guidance and support for the salvage plan.
- CME estimates refloating the vessel back into the cradle within 3-4 days. However, this is subject to change as the plan is refined.
- Halifax Regional Police working with RCMP to investigate potential vandalism.

CCGS Corporal McLaren

Fuel Consumption (m ³ /d):	Not Applicable

[illegible]

IMPACT & MEDIA ATTENTION

Potential impact of incident/threat:

- Conservation and Protection/Search and Rescue Program may be affected due to vessel delay in return to service. Region investigating alternative options for program delivery.

Anticipated media attention:

- High; Media calls incoming.
- Interviews ongoing with media outlets. CTV and The Chronical Herald were on site this morning and requested interviews from CME. There was no request for CCG interviews.

Media/public communications:

- Region has drafted communication lines which have been approved. Coast Guard spokespersons on-site at the shipyard and will respond to media inquiries.
- Pictures selected for social media use, if needed.

NEXT STEPS

- Continued review and update of salvage plan.
- RCMP/Halifax Regional Police investigation ongoing.
- ER to continue monitoring for pollution.
- Assessment of long-term impact to SAR and C&P programs. Mitigation strategies currently under development.
- Engage Public Service and Procurement Canada (PSPC) to ensure contractual obligations are maintained, and Coast Guard interests are protected.
- Continuing to plug and close all water ingress points.
- Pump truck will be on site Mon, November 19th to pump out pollutants in the engine room prior to dewatering the vessel.
- Coast Guard will be setting up a mobile command post (MCP) and location setup has been prearranged with CME.
- If plugging and closing of all holes is completed tomorrow, CME is planning to dewater the vessel.
- On completion of dewatering, CME will clean and spray down the vessel with fresh water, CME is working on producing a procedure for wash down of vessel.
- SCR representative will be on site tomorrow to advise of salvage plan implementation.

Next update from regional SITREP: Monday, 09h00 EST (TBC).

NATIONAL INCIDENT NOTIFICATION SITREP #4 - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 1200 UTC, November 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
 2. Incident Category/Type: Type 4
 3. Date/Time: 1200 UTC , Nov 17, 2018
 4. Primary Department(s)/Agency(s): CCG Atlantic Region
 5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP
 6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
 - c. Amplifying location details (as required): N/A
 7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC, 1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained.
- 18/1230UTC - Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). DFO Science table contacted 17 November and has no issue with current situation. RMI Diving has started to assess vessel status and will close/plug all water ingress points. All water Naval Architecture is on site to provide guidance and over sight of the salvage plan. CCG ER staffs remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.

18/2030UTC- CCG ER employees, Corporal McLaren crewmembers, CCG Marine Engineering employees, and a PSPC representative are on site to monitor the situation. RMI and CME have secured the slipway and removed all existing dangers/ hazards in the area, divers have removed all salvageable equipment under the vessel. High capacity pumps are on site and are being set up in preparation for dewatering of the vessel. Plugs and patches are now fabricated and ready for installation. CME has arranged for 24 hour private security on site.

19/1230UTC - LOC has been engaged to provide independent 3rd party SCR services to CCG. They will review salvage plan, attend site today, and advise CCG of any concerns with stability or implementation of the plan.

8. Actions Taken: Investigation and response efforts are ongoing.

9. Media/Public Communications: High. No media interactions within the past 12 hours.

10. Activities Next 24 Hours: Continuing to plug and close all water ingress points. Pump truck will be on site today to pump out pollutants in the engine room prior to dewatering the vessel. Continue setting up CCG ER mobile command post (MCP) in location. If plugging and closing of all holes is completed today, CME is planning to commence dewatering. SCR representative will be on site tomorrow to advise of salvage plan implementation.

11. Environmental Factors: 1000 ft. Boom deployed around vessel, sorbent boom has been placed in the vessel to collect any pollutants. Current weather: Mixed precipitation, Temp 0 C, winds S 17 km/h

12. Significant Issues: Probable Program impacts to C & P

13. Personnel Status:

a. CCG: N/A

b. Others: N/A

14. Equipment Status:

a. CCG: N/A

b. Others: N/A

15. New Requirements: N/A

16. Command Assessment: Superintendent ROC

Jane,

Not sure on that we'll have to consult with the vessel.

The yard isn't very secure, no fence or gate.

ER representative on site, Ben MacDonald, has confirmed that he was the hard drive under locked custody. There might possibly be water damage.

At this point, it is unknown if cameras were recording, to attain more detail regarding incident. RCMP have offered assistance with their forensic unit. Brian LeBlanc, A/AC, [REDACTED]

Milo: do you have any suggestions re: camera recording.

Thanks,

Jane.

Subject: RE: - C184 - Corporal McLaren - Retrieve ship camera recordings after vessel toppled over - W1366082 - PG2172

Pat Fordyce was on the vessel Friday afternoon and confirmed that the camera system was on at that time. We have given the password to the camera system to the Captain so that he can provide to the RCMP. Pat's name has been given as the contact in case the RCMP need technical assistance to recover video files.

Mo and Pat are working to have the ship's servers running out of TEW later today so that vessel personel can access vessel e-mail remotely from a laptop which Mo will also be providing.

That's fine, I would worry to much about it. Are he engine room and external cameras on the same server?

Julie,

Does the ship typically leave the cameras running when in the yard?

ER representative on site, Ben MacDonald, has confirmed that he was the hard drive under locked custody. There might possibly be water damage.

At this point, it is unknown if cameras were recording, to attain more detail regarding incident. RCMP have offered assistance with their forensic unit. Brian LeBlanc, A/AC, [REDACTED]

Milo: do you have any suggestions re: camera recording.

Thanks,

Jane.

Morning all,

Peddle: operational

McLaren: Danny sent a report with a loose timeline of events that transpired on Saturday, with pictures attached. I was there yesterday where the yard continued to clean up and assess the situation/damage to the cradle. Peter Johnson arrived on site to assist the CME nav arc (Tim Haggard from Allswater).

A few preliminary issues that came up while I was there yesterday: safety of the divers plugging the hull through way fittings on the stbd side underbelly- they may have to enter the ship and plug from the inside. The ship is resting on 3 points of contact.

Shafts are installed and seals were set before the incident: hub blades were off waiting to be installed. They were recovered from the water yesterday.

Rudder stacks were removed at the time of the incident so water could ingress easily through the stock housing.

All skin valves were removed from the ship waiting to be inspected before the incident occurred..

The only point of contention when I left the yard yesterday was whether the water tight doors should be closed while pumping. They are currently open. Peter Johnson and Ravi Vaz will likely have their hand in this decision.

We have been informed by class (ABS) that they will not be involved until the salvage operation is complete. They will come aboard to help assess the damage after the vessel is pumped out and deemed stable.

Transport has been notified.

Electronics – The video security footage from the yard's surveillance is turning out to be unreliable (heard that the system stopped recording at the end of August). We recovered the hard drives from the electronics room on the ship and it is currently in possession of the C/O and he is looking to pass it along to the RCMP as a part of their investigation.

Environmental response is also on scene and they have boomed off the ship from the rest of the marine environment and are continuously monitoring for leaking oil products.

Media is all over the place.

I'll be in constant communications with multiple parties via phone and email as we move forward with the situation.

The salvage plan is updated regularly, as new updates come out I'll forward them on.

I'm looking to go back out to the yard sometime mid morning after I get a bunch of work done here,

Jeff Mercier

Hi Rachel,

We don't have enough information yet about the damage on the Corporal McLaren to make a RTS estimate, and there is no plan in place for the program. To reference the question lower in the email thread, there is no plan yet of reducing or delaying the G. Peddle's refit period.

Regards,

Elizabeth Chisholm

Good day ROC Atlantic,

After this morning's operational brief, I received a request for information from Derek Moss. He wanted to know if there is a plan in place in the event that the Corporal McLaren is still non-operational by the end of her original refit program (December 19th). I realize that information might still be scanty at this time, though any update would be greatly appreciated.

Thanks in advance,

Subject: McLaren/Peddle Refits

Hey Emilie,

It may be a little too early for me to ask but the Peddle is due for its six week refit the first of January. Do you know, or could you find out, whether CCG will be looking into delaying the refit for the Peddle or whether another vessel would be available to Maritimes region if the McLaren isn't ready by January 1. If both vessels are out being repaired they would then be without a platform.

Many thanks,
Nicole

NATIONAL INCIDENT NOTIFICATION SITREP #5 - ROCATL 2018/046, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 1200 UTC, November 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 2200 UTC , Nov 19, 2018
4. Primary Department(s)/Agency(s): CCG Environmental Response Atlantic Region
5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP, E&I, DFO, PWGSC
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
7. Current Situation: FEMP has been activated 1225 UTC November 17, 2018. Environmental Response working on the case , approximately 2000L of Diesel on board. ER requested that CCGS Sambro lifeboat station deploy their boom immediately. At 1445UTC, 1000 ft. Boom has been deployed around vessel. ER Deputy Superintendent, Marine Engineering and two ER response specialists on scene. Salvage plan being developed by CME(shipyard). TC Duty Officer has been briefed on incident by ER Superintendent. 24 hr. security being maintained.

18/1230UTC - Vessel has been secured in its current off-cradle position. Preliminary salvage plan has been produced and has been approved by ECCC (Environment and Climate Change Canada). DFO Science table contacted 17 November and has no issue with current situation. RMI Diving has started to assess vessel status and will close/plug all water ingress points. All water Naval Architecture is on site to provide guidance and over sight of the salvage plan. CCG ER staffs remain on site to monitor and take action in the event of pollutant release. DFO and ECCC have been requested to provide sensitivity mapping of the area.

18/2030UTC- CCG ER employees, Corporal McLaren crewmembers, CCG Marine Engineering employees, and a PSPC representative are on site to monitor the situation. RMI and CME have secured the slipway and removed all existing dangers/ hazards in the area, divers have removed all salvageable equipment under the vessel. High capacity pumps are on site and are being set up in preparation for dewatering of the vessel. Plugs and patches are now fabricated and ready for installation. CME has arranged for 24 hour private security on site.

19/1230UTC – London Offshore Consultants (LOC) has been engaged to provide independent 3rd party SCR services to CCG. They will review salvage plan, attend site today, and advise CCG of any concerns with stability or implementation of the plan. CCG ER Mobile Command Post (MCP) activated this morning. RMI Divers continuing to plug and patch openings in the vessel. Planning to strategically keep certain holes open for the evening: 2 wet exhausts, 3 overboard discharges, starboard rudder opening, starboard high suction sea bay and deck vents due to tides. Valuables taken off of the Corporal McLaren and taken to BIO in Dartmouth.

8. Actions Taken: Investigation and response efforts are ongoing.

9. Media/Public Communications: High. Interviews with CBC Radio, Canada Press, CBC TV, Global, The Signal, and Janes Warships.

10. Activities Next 24 Hours: Continuing to plug and close all water ingress points tomorrow morning. Pump truck will be on site to pump out pollutants in the engine room prior to dewatering the vessel. Once plugging and closing of all holes is complete, CME is planning to commence dewatering at low tide.

11. Environmental Factors: 1000 ft. Boom deployed around vessel, sorbent boom has been placed in the vessel to collect any pollutants. Sorbent boom has been placed around the vessel due to some light sheening. Current weather: Cloudy with drizzle, Temp 5 C, winds S 20 km/h.

12. Significant Issues: Probable Program impacts to C & P

13. Personnel Status:

a. CCG: 23

b. Others: 3

14. Equipment Status:

a. CCG: Command Trailer (MCP), generator, 7 response trucks, ER response trailer

b. Others: n/a

15. New Requirements: Technician to repair MCP furnace, E&I to hardwire internet to MCP.

16. Command Assessment: CCG remains in command and control of the incident to ensure proper response and environmental protection.

Subject: Incident SITREP 007 - Environmental Response Atlantic, CCGS Corporal McLaren Partially Submerged at Sambro, NS

INCIDENT SITREP 007 – Environmental Response Atlantic, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 0800 LT, November 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 1800 LT, Nov 20, 2018
4. Primary Department(s)/Agency(s): CCG Environmental Response Atlantic Region
5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP, E&I, DFO, PWGSC
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
7. Current Situation: CCG ER has activated a Mobile Command Post (MCP) on site and has brought in additional personnel from the region. Contractor is on site and continuing to plug and patch any damages to the vessel. London Offshore Consultants (LOC) are engaged and providing 3rd party Special Casualty Representative services to CCG, they will review the salvage plan and advise CCG of any concerns with stability or implementation of the plan.

There has been no changes to the state of the Corporal McLaren since the last reporting period. A 1000ft of containment boom remains in place around the vessel. The boom has been lined with sorbent boom to collect any light sheen in the area. Sorbent boom has also been placed inside the vessel to collect any pollutants.

Pumping of surface oil from the inside of the vessel is complete for today and will continue into tomorrow. The vacuum truck departed site today with approximately 15 cubic meters of oily water. Sorbents were used to recover a small amount of oil in the bow thruster compartment and no oil was found in the emergency generator room.
8. Actions Taken: Investigation and response efforts are ongoing.
9. Media/Public Communications: Remain high.
10. Activities Next 24 Hours: CME plans to review salvage and stability plans for when dive operations are complete. Modeling and safety protocols have begun; plans are expected to be in place by Thursday evening. Continuing to plug and close the remaining 3 water access points and lines will be placed on all 4 corners of the vessel in preparation for

pumping. Divers will continue to clean up debris around the cradle. A Scientific Support Coordinator from ECCC will be on site tomorrow for pumping operations.

11. Environmental Factors: winds are east 20kts, winds will be increasing throughout the night and by Wednesday morning they will be westerly 30kts. Rain is forecast for this evening and tonight. Air temperature plus 2 falling to minus 1 tomorrow.

12. Significant Issues: Probable Program impacts to SAR, C&P, other CCG programs.

13. Personnel Status:

a. CCG: 18

b. Others: 3

14. Equipment Status:

a. CCG: Command Trailer (MCP), generator, 5 response trucks, ER response trailer

b. Others: 1 ton work truck

15. New Requirements: E&I to hardwire internet to MCP

16. Command Assessment: CCG remains in command and control of the incident to ensure effective response and environmental protection.

INCIDENT INVESTIGATION REPORT (IIR)

9 B.1

NOTE: If this incident falls under the definition of a reportable Marine Occurrences as per Transportation Safety Board (TSB) Regulations, Section 3(1), a Report of a Marine Occurrence form shall be completed within 30 days of the occurrence.

A. Type of Incident (Required) (Choose only one)

- ☐ Disabling Injury (visit to medical professional, time lost) ☐ Loss of Consciousness due to electric shock or toxic atmosphere
☐ First Aid ☐ Near Miss
☐ Minor Injury (visit to medical professional, no time lost) ☐ Pollution
☐ Activation of an Emergency Procedure ☒ Property Damage
☐ Fire or Explosion (Shore only) ☐ Unsatisfactory Condition
☐ Other (specify)

B. General Information (Required)

Employer's (Department) Name Canadian Coast Guard Site/Vessel Name (and official number) CCGS Corporal McLaren

Date of Report (YYYY-MM-DD) 2018-11-20 Mailing Address PO Box 1000 ; 50 Discovery Drive, Dartmouth NS B2Y 3Z8

Name of Responsible Supervisor John Walker Supervisor's Telephone # 902-478-9363

Organization (Select One)

☐ National HQ ☐ Coast Guard College ☒ Region (if selected, choose Directorate and Program/Branch below)

Regional Directorate (Select One)

☐ AC's Office ☒ Fleet ☐ IBMS ☐ ITS ☐ Incident Management ☐ Navigational Programs

Program/Branch (Select One)

- ☐ AtoN ☐ MarSup ☒ Refit and Maintenance
☐ Canso ☐ MCI ☐ ROC
☐ CGSS ☐ MCTS ☐ SAR
☐ E&I ☐ ME ☐ Science
☐ EFM (C&P) ☐ MNS ☐ Vessels of Concern
☐ ER ☐ MSET ☐ Other
☐ Ice ☐ Ops Business
☐ ILS

C. Employee Data (As Required) * (to be completed only if the employee sustains an injury). * To be completed by the injured employee's supervisor or their designate. All fields shall be completed.

Surname Given Name Initial(s) Age

Gender ☐ Female ☐ Male Job Title Years of experience in current position

Employment Status

- ☐ Indeterminate ☐ Term ☐ Casual/Relief ☐ Program Client ☐ Student ☐ Contractor
☐ Other (Specify)

D. Incident Information (Required)	
Did this involve a motor vehicle* accident? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	*If yes, please ensure the Motor Vehicle Accident (MVA) Report is completed.
Did this involve Helicopter Operations? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Did this incident involve Small Craft Operations? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Location of Incident (include geographical name of body of water, waterway, harbour, latitude, longitude if applicable)	
CME Shipyard, Sambro NS	
Date of Incident (YYYY-MM-DD)	Time of Incident (Local)
2018-11-17	~0830
Body part injured (if applicable)	
<input type="checkbox"/> Abdomen	<input type="checkbox"/> Back

Okay thx. Will cc you on emails.

The ER group are interesting, trailer + many people with many forms.

We are still waiting for an updated salvage plan. Oily water on the surface inside is being pumped off. This appears to be ahead of the salvage plan.

Terry,

Danny and myself are going again tomorrow. Today when i was there, they were skimming the oil off the top of the water surface on the internal parts of the ship and pumping to holding tanks, plugging more hull through ways and installing the air damper covers.

The nav arcs were still running simulations and models and accumulating more data on the ship'd bilged condition.

Hi Julie.

The internet connection is still not working. They have called eastlink to come and repair, but they haven't arrived yet

The entire shipyard has no internet.

The command trailer has a cell modem but they say it's slow

Milo,

The cable has been run from the shipyard to the command post; however, the shipyard's internet connection via Easlink is down at the moment. The outage has been reported to Easlink by the shipyard. No ETA on this. In the interim, the command post has internet access via cell.

Pat Fordyce was on the vessel Friday afternoon and confirmed that the camera system was on at that time. We have given the password to the camera system to the Captain so that he can provide to the RCMP. Pat's name has been given as the contact in case the RCMP need technical assistance to recover video files.

Mo and Pat are working to have the ship's servers running out of TEW later today so that vessel personnel can access vessel e-mail remotely from a laptop which Mo will also be providing.

ER representative on site, Ben MacDonald, has confirmed that he was the hard drive under locked custody. There might possibly be water damage.

At this point, it is unknown if cameras were recording, to attain more detail regarding incident. RCMP have offered assistance with their forensic unit. Brian LeBlanc, A/AC, [REDACTED]

Milo: do you have any suggestions re: camera recording.

Thanks,

Jane.

CCG ATL ROC / COR ATL GCC (DFO/MPO)

From: MSOC-East / COSM-Est (DFO/MPO)
Sent: November-21-18 8:56 AM
To: DFO.F CCG Nat Incidents / Incidents Nat GCC F.MPO
Subject: Incident SITREP 008 - Environmental Response Atlantic, CCGS Corporal McLaren
Partially Submerged at Sambro, NS

Incident SITREP 008 - Environmental Response Atlantic, CCGS Corporal McLaren Partially Submerged at Sambro, NS

1. CCG Region/Incident Name: At 0800 LT, November 17, 2018 CCGS Corporal McLaren was reported to be partially submerged in water after slipping off the cradle at refit location in Sambro, NS.
2. Incident Category/Type: Type 4
3. Date/Time: 0800 LT, Nov 21, 2018
4. Primary Department(s)/Agency(s): CCG Environmental Response Atlantic Region
5. Supporting Departments/Agencies: NCC, Halifax Regional Police Department, TC, ECCC, RCMP, E&I, DFO, PWGSC
6. Regional Location: Atlantic
 - a. Province/Territory: Nova Scotia
 - b. City: Sambro
7. Current Situation: CCG ER has activated a Mobile Command Post (MCP) on site and has brought in additional personnel from the region. Contractor is on site and continuing to plug and patch any damages to the vessel. London Offshore Consultants (LOC) are engaged and providing 3rd party Special Casualty Representative services to CCG, they will review the salvage plan and advise CCG of any concerns with stability or implementation of the plan.

There has been no changes to the state of the Corporal McLaren since the last reporting period. A 1000ft of containment boom remains in place around the vessel. The boom has been lined with sorbent boom to collect any light sheen in the area. Sorbent boom has also been placed inside the vessel to collect any pollutants.

Pumping of surface oil from the inside of the vessel will continue today. The vacuum truck departed site yesterday with approximately 15 cubic meters of oily water. Sorbents were used to recover a small amount of oil in the bow thruster compartment and no oil was found in the emergency generator room. Security was maintained overnight.
8. Actions Taken: Investigation and response efforts are ongoing.

9. Media/Public Communications: Remain high.

10. Activities Next 24 Hours: CME plans to review salvage and stability plans for when dive operations are complete. Modeling and safety protocols have begun; plans are expected to be in place by Thursday evening. Continuing to plug and close the remaining 3 water access points and lines will be placed on all 4 corners of the vessel in preparation for pumping. Divers will continue to clean up debris around the cradle. A Scientific Support Coordinator from ECCC will be on site today for pumping operations.

11. Environmental Factors: gale warning in effect. Wind westerly 25 to 35 knots diminishing to westerly 20 to 25 this morning then backing to southwest 30 early this evening. Wind increasing to westerly 35 late this evening then diminishing to northwest 30 Thursday morning. Wind increasing to northwest 35 Thursday evening.

12. Significant Issues: Probable Program impacts to SAR, C&P, other CCG programs.

13. Personnel Status:

a. CCG: 18

b. Others: 3

14. Equipment Status:

a. CCG: Command Trailer (MCP), generator, 5 response trucks, ER response trailer

b. Others: n/a

15. New Requirements: E&I to hardwire internet to MCP

16. Command Assessment: CCG remains in command and control of the incident to ensure effective response and environmental protection.

There has been no changes to the state of the Corporal McLaren since the last reporting period. A 1000ft of containment boom remains in place around the vessel. The boom has been lined with sorbent boom to collect any light sheen in the area. Sorbent boom has also been placed inside the vessel to collect any pollutants.

Pumping of surface oil from the inside of the vessel is complete; the vacuum truck departed site on 20/Nov with approximately 20,000L of oily water. Vessel is approximately 90% sealed and the flow of water in and out of the ship is now controlled. Hoses are being installed inside the ship in areas designated for pumping but pumping won't begin until the salvage and stability plan is reviewed and approved. CME has started placing lines on each corner of the vessel for when pumping operations

begin. CME is developing safe work procedures for pumping operations. A contractor has been hired to remove all contaminants once the vessel is refloated. PSPC has been in contact with CME's insurance company and a file number has been issued.

8. Actions Taken: Investigation and response efforts are ongoing.

9. Media/Public Communications: Remain high.

10. Activities Next 24 Hours: CME will be reviewing salvage and stability plans, and modeling and safety protocols have begun; plans are expected to be in place by Thursday evening. Divers will continue to clean up debris around the cradle.

11. Environmental Factors: gale warning and freezing spray warning in effect. Wind westerly 35 knots then veering to northwest this evening. Flurries this evening and overnight. Low of minus 6, with wind chill feels like minus 17.

12. Significant Issues: Probable Program impacts to SAR, C&P, other CCG programs.

13. Personnel Status:

a. CCG: 17

b. Others: 4

14. Equipment Status:

Milo,

The cable has been run from the shipyard to the command post; however, the shipyard's internet connection via Easlink is down at the moment. The outage has been reported to Easlink by the shipyard. No ETA on this. In the interim, the command post has internet access via cell.

Subject: RE: - C184 - Corporal McLaren - Retrieve ship camera recordings after vessel toppled over - W1366082 - PG2172

Pat Fordyce was on the vessel Friday afternoon and confirmed that the camera system was on at that time. We have given the password to the camera system to the Captain so that he can provide to the RCMP. Pat's name has been given as the contact in case the RCMP need technical assistance to recover video files.

Mo and Pat are working to have the ship's servers running out of TEW later today so that vessel personel can access vessel e-mail remotely from a laptop which Mo will also be providing.

Hello,

Update on the subject vessel from today:

1. %90 of hull openings now sealed, seal test completed, some areas to be resealed.
2. Total oily water mixture removed – 20 cubic metres, approx 85 litres is hydrocarbon. 80 litres was removed in the first of 2 trucks, summation from ? most oil has been removed inside the vessel's dry spaces.
3. Insurance claim number has been assigned. Adjusters will be on site after the vessel is alongside, likely from a main office (Toronto?).
4. 3 mooring lines are attached to the vessel for control when the vessel is upright and stable.
5. Flexible hoses are on the vessel for pumping when the vessel is upright and stable.
6. The salvage plan will be reviewed when ready, thought will be Thursday late in the day; salvage plan is subject to review and acceptance by ICS, LOC, TC, ??
7. Projections based on today's information; vessel raised by Saturday, back out of the water next Wednesday. (presumption the vessel will be re-docked at CME?)
8. Brief conversation between PSPC and Yard – when vessel back out of the water, repairs may include removal of furniture, insulation, main/aux engines, all wiring, etc. Yard asked if the engine replacements planned for the vessel could be installed now, PSPC indicated no. Presumption CME will perform the remedial work is premature.
9. Cradle will be assessed and repaired as necessary, tested and put back into service.
10. No update from the police whom looked at the closed circuit tv camera coverage from the ship, except maybe 1 or 2 flashlights outside the ship. Hard drive now at BIO.
11. Wednesday overnight westerly winds 25-35 knots. Cooling trend until this weekend.
12. 24 hour security posted at the yard by CME and CCG.
13. Area of vessel now lite by floodlights.
14. Question from me; will this incident - security issue and drydock vulnerability - be addressed by PSPC in contracts awarded going forward? Who assessed the yard for compliance with the security requirement?
15. Ian Royle is replacing me, arriving Thursday and staying until Sunday.

Thx,
Peter

Hi,

Update:

1. Current estimates are for all ships through hull points to be plugged end of the day. Might be in a position to start pumping tomorrow.
2. Water/Oil mixture will be skimmed as I understand it before large amounts are pumped.
3. Hard drive with on board recorded video was retrieved from the ship, plans ongoing for retrieving footage. RCMP or CCG.
4. TC pollution dash 8 did a few on top fly overs.
5. All watertight doors (5) are remaining open during dewatering.
6. I called Simon Grice - TC DSIP coordinator. TC are aware of the situation. They may send an inspector to monitor.
7. Vessel is completed its change of RO, all paper work completed. Telecon: Grice to Plomidon.
8. Some media were here. Yard vp made a statement.

That's it for now.

Peter

FYI

Preliminary Information I know so far.

All compartments are flooded.

There are 3 Grounding locations

One at the stern

One at frame 18 on a docking block

And one on the cradle at frame 29. I understand that this point spans to about 10 ft of contacts with the vessel.

Good morning,

Today's operations at the Corporal McLaren incident are as follows:

- No on site operations since the last SitRep. Security maintained presence throughout the night.
- Three CCG ER employees will be on site to monitor the situation along with 3 ships crew.
- RCMP and Halifax Metro Police are expected to be on scene today to continue investigation. RCMP extended the offer of assistance in data recovery from vessel cameras.
- Transport Canada will be on site this morning to oversee operations.
- RMI and CME are planning to secure the slipway and remove all existing dangers/ hazards in the area.
- Divers will start removing all salvageable equipment under the vessel. This includes 8 prop blades which don't appear to be damaged after initial assessment.
- Plug and close all water ingress points including 3 sea chests, 3 valves starboard side, 5 valves port side, 2 rudder stocks, 4 wet exhaust, 1 depth sounder, possible one air intake on the starboard side crane.
- High capacity pumps are on site and will be set up in preparation for dewatering of the vessel.
- Plugs and patches are being fabricated on site for installation.
- No pollution observed on site this morning. Containment boom placed around vessel and dewatering will take place within the boom.
- No media present on site.

Favorable weather conditions throughout the day on site.

- NW winds 10-20 kts, clear skies and temperature just above freezing.

Thanks,

Ben MacDonald

Hi,

Arrive Halifax?

I am at the yard in Sambro. Using the ICS trailer on the left side of the main building.

What time are you arriving?

Peter

Sorry Milo. Didn't see your message. Down there now with a car full of ME.

Can you follow up on connection for ICP and close loop with ? Keith indicates techs there Monday, but haven't heard from them since. They are working off cell.
